

## Important Notice

Robert B. Our Company will be installing a sanitary sewer main system on your street shortly. A service lateral will be installed from the sewer main to the edge of the road right-of-way (property line) to serve your property.

A wooden stake has been placed in your front yard to indicate where we intend to install your new service lateral connection. If this location is acceptable, you need not do anything. If, however, you wish to move the location, please move the stake to your desired location. After relocation of the stake, please email us at ([waterservices@robertbour.com](mailto:waterservices@robertbour.com)) to let us know you've changed the location. You may wish to consult with your plumber or contractor if you require advice on the location.

If you have not informed us of any change to your service lateral location by the time sewer construction starts in front of your property, the service lateral will be located as shown on the Engineer's Contract Drawings. The sewer connection piping from your structure to the service lateral stub at your property line is the owner's responsibility.

Please be patient with the construction as your street disturbed areas will be restored after the installation of the sewer system.

Thank you in advance for your cooperation.
