

Town of Mashpee Sewer Commission Policy – Low Pressure Grinder Pumps:

Sewer Policy #2

Date approved: January 26, 2023

The engineering design for the Town of Mashpee Wastewater Collection System(s) will generally consist of gravity mains and service laterals, except in certain locations where individual Low Pressure Grinder Pump Systems are deemed necessary due to elevation differences.

Where a Low-Pressure Grinder Pump System is specified for a single family residential property in the original sewer system design or is, otherwise, recommended for installation at any such property by the Town's design engineer, the Town will provide one (1) Low Pressure Grinder Pump System per property at no charge to the property owner.

The property owner will assume ownership of the Low-Pressure Grinder Pump System upon acceptance from the Town and shall thereafter be solely responsible for its installation, operation, maintenance and repair. The operation and use of such Low Pressure Grinder Pump Systems shall comply with all rules, regulations, operating procedures and policies adopted by the Sewer Commission.
