

SUBMERGED DREDGE PIPE

THE COUNTY DREDGE HAS COMPLETED THE DREDGING OF THE APPROACH CHANNEL. AS DETAILED IN THE CHART BELOW, THERE ARE TWO SECTIONS OF 16 INCH HARD PLASTIC PIPE SUBMERGED TO THE SOUTH/SOUTHWEST OF THE POPPONNESSET SPIT IN SHALLOW WATER.

MARINERS ARE URGED TO EXERCISE CAUTION WHEN BOATING IN THIS AREA.

The Approximate Location of Two Sections of Dredge Pipe Submerged south of the Popponneset Spit

There is a total of ~4,800' feet of pipe in two sections (~3,200' & ~1,600') submerged in approximately 5' of water just south of the Popponneset Spit. There are Orange & White Poly Balls marking the location of the end of the pipe & anchor at each end. There is also a second Poly Ball marking the mid-points of each pipe.

The pipe is 'loaded' with ~25% sand to keep it in position. The pipe is being stored here on a temporary basis and will be moved to another location within the next 4 weeks.

PLEASE CONTACT THE COUNTY DREDGE FOR FURTHER INFORMATION:
