Town of Mashpee

Planning Board
16 Great Neck Road North
Mashpee, Massachusetts 02649

Meeting of the Mashpee Planning Board
Wednesday, July 17, 2019
Waquoit Meeting Room, 7:00 PM

Call Meeting to Order

7:00PM – Waquoit Meeting Room – Mashpee Town Hall

- Pledge of Allegiance

Approval of Minutes

- Review and approval of meeting minutes from July 3 , 2019

Public Hearings

7:10 PM - Cape and Island's Engineering

Cape and Island's Engineering has submitted an application for consideration of a Definitive Subdivision pursuant to M.G.L. Chapter 41 Section 81T on behalf of Mark and Donna Lopez, subject property owners. The subject property is currently addressed as 103 Meetinghouse Road and identified on Assessor's Map and Block 45-50-0. The parcel consists of 284,184+/-sq.ft. area, located on the west side of Meetinghouse Road and to the east of Mashpee River.

7:15 PM – Cape and Island's Engineering

Cape and Island's Engineering has submitted an application for consideration of a Special Permit for a Cluster Subdivision to create three (3) building lots and two (2) open space parcels pursuant to Massachusetts General Laws Chapter 40A Section 9 and the Mashpee Zoning Bylaw §174-25(I)(4) on behalf of Mark and Donna Lopez, property owners of the subject parcel. The parcel consists of 284,184+/-sq.ft. area, located on the west side of Meetinghouse Road and to the east of Mashpee River.

7:30 PM – Modi, LLC

Modi, LLC has filed an Application for Special Permit to construct a coffee shop with facilities for processing and packaging coffee along with a future industrial tenant at 10 Evergreen Circle, Lot B (Map 19 Block 10) as required by Section 174-25 (I)(16) and Section 174-45.6 of the Mashpee Zoning Bylaw. The property is located in the C-3 Zoning District and is within the Light Industrial Overlay District.

Approval Not Required

- Jonathan Pelloni, Esq. for Duco Associates, Inc. (property owner) 28 Blue Castle Drive, Assessors Map and Block 104-11-0
- Jonathan Pelloni, Esq. for Ellen Brady (property owner) 20 Blue Castle Drive. Assessors Map and Block 104-10A-0

New Business

- Vote to set public hearing date for special permit application made by Kevin Andrade
- Articles submitted to the Board of Selectmen for the October Town Meeting Warrant
- Mashpee Commons Intent to Apply for Development Agreement

Town of Mashpee

16 Great Neck Road North
Mashpee, Massachusetts 02649

Old Business

Chairman's Report

- July 15th Meeting of Town Regulatory Boards
- Mashpee EDIC Efforts to Develop Town-owned Land

Board Member Committee Reports

- Cape Cod Commission, Community Preservation Committee, Design Review, Plan Review, Environmental Oversight Committee, Greenways/Quashnet Footbridge, Historic District Commission, MMR Military Civilian Community Council.

Updates from Town Planner

Additional Topics (not reasonably anticipated by Chair)

Adjournment

Mashpee Planning Board
Minutes of Meeting
July 3, 2019 at 7:00 p.m.
Mashpee Town Hall-Waquoit Meeting Room
16 Great Neck Road North
Approved 7/17/19

Present: Chairman Mary Waygan, Vice Chairman Joe Cummings, Dennis Balzarini, John (Jack) Phelan, Joseph Callahan, Robert (Rob) Hansen (Alt.)
Also: Evan Lehrer-Town Planner, Charles Rowley-Consultant Engineer

CALL TO ORDER
The Town of Mashpee Planning Board meeting was opened with a quorum in the Waquoit Meeting Room at Mashpee Town Hall by Chairman Waygan, at 7:00 p.m. on Wednesday, July 3, 2019. The Chair welcomed attendees and stated that the meeting was being videographed and recorded and noted that, without a publicly advertised public hearing on the agenda, public comment could not be accepted at this meeting. The Pledge of Allegiance was recited.

APPROVAL OF MINUTES—April 17, 2019 and June 19, 2019

MOTION: Mr. Balzarini made a motion to accept the minutes of April 17th as presented. Mr. Cummings seconded the motion. 4 yes, 2 abstain

MOTION: Mr. Balzarini made a motion to approve the minutes of June 19th as presented. Mr. Phelan seconded the motion. All voted unanimously.

NEW BUSINESS

Sign Certificate of Action for Blue Sky Towers II, LLC-The certificate, accepting the withdrawal without prejudice of the application, was signed by Planning Board members. Mr. Balzarini inquired about materials submitted previously by the applicant, but Mr. Lehrer noted that, when the applicant refiled, information from the previous proceedings would be rolled in to streamline the contents of their application. The Chair stated that the applicant could be required to re-submit everything, in order to ensure that there was no confusion regarding submitted materials. Mr. Lehrer stated that his office would maintain a list of exhibits.

Signatory Page for Barnstable County Registry of Deeds-Members of the Board signed the signatory page.

Vote to Select Public Hearing Date for Mendes Way-There were no other hearings currently scheduled for August 7.

MOTION: Mr. Balzarini made a motion to set the Public Hearing to August 7 at 7:10 p.m. Mr. Phelan seconded the motion. All voted unanimously.

Consideration of Draft Accessory Apartment Warrant Article for Submission to Board of Selectmen-Mr. Lehrer discussed changes to Mashpee's existing Accessory Apartment, which he recommended as four separate Articles.

Mr. Lehrer recommended the following fundamental changes to Section 174-45.4, beginning with allowing Accessory Apartments by right, with a Building Permit, in place of a Special Permit.

A. Special Permit replaced by Building Permit
B. Change "with" to "to"
C. Allowing the addition of a newly constructed or previously constructed detached apartment
E. Accessory apartments shall be consistent with the predominant design character and contribute to the lot coverage maximum
H. *Old H* replaced with *old J*
I. *Old I* replaced with requiring that rentals not be offered on a weekly or daily basis and must be rented for a minimum of one month
J. *New*, accessory apartment was intended as a long term rental to a tenant and could not be listed for sale

Mr. Lehrer suggested updating the Accessory Apartment Bylaw Chart Section 174-25 (A)(8) by striking "SP" as it would become a by right use.

Amending Section 174-31 Land Space Requirements Table would propose that a detached accessory apartment be exempt from rear and side setbacks of 15 feet, and allow construction with a 5 foot setback from the property line. Should this not be approved, the 15 foot setback would remain.

Amendments to Section 174-3 Terms would clarify definitions and the OSID should be consistent, allowing for two bedrooms in place of one bedroom.

Mr. Balzarini expressed concern about the 5 foot setback, particularly as a homeowner could build a structure up to 35 feet high. Mr. Lehrer stated that smaller lots could not create non-conformity and if a home already met 25%, would not be allowed to build a detached structure. Mr. Lehrer confirmed that only one accessory apartment could be created for each lot. Mr. Balzarini inquired whether the Building Commissioner supported these changes and the added responsibilities but Mr. Lehrer responded that he was unsure. Mr. Balzarini liked the concept of accessory apartments but did not support a 5 foot setback, preferring to maintain the 15 foot setback. Mr. Lehrer stated that it was a best practice nationwide to offer reduced setbacks to allow for accessory apartments. Mr. Callahan inquired further about nationwide practices regarding setbacks and whether it was typically 5 feet. Mr. Lehrer responded that housing advocates supported reduced setbacks but that not all communities adopted the recommendations.

Mr. Phelan stated that many Cape communities had passed similar accessory apartment bylaws. Mr. Lehrer stated that the Cape Cod Commission did not propose the reduced setback in the model. Mr. Phelan stated that there was building code regarding the 5 foot setback suggesting that it could be problematic since there could be no doors or windows on that side, and the setback may need to remain at 15 feet.

Mr. Balzarini expressed concern about the size of lots and septic systems and Mr. Lehrer confirmed that the Board of Health would be required to sign off on the matter. Mr. Cummings also disagreed with a 5 foot setback.

Mr. Callahan inquired about Section I and the one month rental requirement minimum. Mr. Callahan inquired whether a homeowner could rent their home and move into the apartment. Mr. Lehrer

responded that the homeowner needed to demonstrate occupancy of the principal structure to be issued a building permit. The Chair stated that, as long as the home was the principal tax structure, it likely would not prevent the homeowner from doing so. Mr. Phelan stated that Falmouth required a 6 month minimum and Chatham a 7 month minimum, and inquired about significant evidence to be shown. There was discussion about whether or not to require 6 months, but it was noted that challenges could be created for J-1 visa holders. There was consensus to try the 1 month minimum and see whether changes would need to be made, as well as reevaluate the 15 foot setback.

Mr. Balzarini inquired whether the Board of Health would be monitoring the rental taxes on the accessory apartments and Mr. Lehrer stated that it could not be used as a vacation rental. Mr. Lehrer noted that there were a number of illegal apartments in Mashpee and that it would be good to have an enforcement mechanism in place.

Mr. Hansen inquired about the increase of bedrooms and Mr. Lehrer confirmed that the Board of Health would ensure adequate capacity in the septic system for the addition of an accessory apartment. Regarding the minimum one month stay, Mr. Hansen reiterated that the homeowner could rent out their home weekly while living in the accessory apartment. The Chair stated that the Bylaw did not require that the homeowner live in their principal residence for 12 months but that the homeowner needed to show the Town that the house was their principal residence. Mr. Hansen stated that the homeowner could live in the accessory apartment during the 3 months of summer, while renting out the house, returning to the home during the off season. The Chair stated that a minimum of 2 or 3 months would be required for the accessory apartment, to avoid that scenario. In reference to Mr. Hansen's scenario, Mr. Lehrer suggested that the principal structure would then need to be registered with the Board of Health, and taxes paid on the rental.

The Chair inquired whether the requests would be considered by Design Review and Mr. Lehrer confirmed that it would not. The Chair stated that she had developed a cover memo to share the bylaw changes with Design Review, which would include the Building Commissioner, and the ZBA, so that they could provide comment to the Planning Board.

There was consensus to try it out as written, and follow up with the Building Commissioner regarding how the Bylaw was working, and the 15 foot setback would remain in place.

Mr. Lehrer inquired about properties owned by LLCs and Trusts, and how best to accommodate them. The Chair suggested following up with Town Counsel, regarding principal dwelling.

MOTION: Mr. Balzarini made a motion that the first two pages be submitted to the Board of Selectmen, as presented, to be placed on the October 2019 Warrant. Mr. Callahan seconded the motion.

Mr. Rowley inquired whether the applicant could upgrade the septic system to apply for an accessory apartment and Mr. Lehrer confirmed that the Board of Health would need to certify the system in order for an applicant to receive the Building Permit. The system would need to accommodate the extra living spaces.

All voted unanimously.

MOTION: Mr. Balzarini made a motion to send the use table to the Board of Selectmen, to be placed on the October 2019 Town Meeting Warrant. Mr. Callahan seconded the motion. All voted unanimously.

MOTION: Mr. Balzarini made a motion that there would be no action reducing the side setback to 5 feet and redress the matter one year from passage at Town Meeting. Mr. Phelan seconded the motion. All voted unanimously.

MOTION: Mr. Balzarini made a motion to submit the Definitions for inclusion on the October 2019 Town Meeting Warrant. Mr. Cummings seconded the motion. All voted unanimously.

Chairman Waygan stated that the information would be forwarded to the Board of Selectmen on Monday. The Chair further noted that a regulatory meeting would be held on July 15 at 6:30 p.m. Should the items be added to the Town Warrant by the Board of Selectmen, the Planning Board would hold a Public Hearing and accept public comment on the matter at that time. The Chair asked Mr. Lehrer to ensure that ZBA Chair John Furbush and Design Review members be in receipt of the information.

Charles Rowley June Invoice-An invoice in the amount of $490 was received for regular services in the month of June. It was confirmed that Mr. Rowley would be reviewing the plans of Meetinghouse Road and Cape Cod Coffee.

MOTION: Mr. Balzarini made a motion to approve the expenditure. Mr. Cummings seconded the motion. All voted unanimously.

Mr. Rowley confirmed there was no further information available on Ockway since his last inspection, prior to the last Planning Board meeting. Mr. Phelan noted that the drop off had been built up and Mr. Rowley responded that he had asked Mr. Morin to do so at the end of Blue Castle as well as loam and seed near Mr. Virgilio's home.

OLD BUSINESS

One Cape Registration-Mr. Lehrer asked that any additional members contact him to confirm their attendance.

CHAIRMAN'S REPORT

The Chair stated that correspondence had been received regarding a joint meeting between the Board of Selectmen and regulatory boards on Monday, July 15 at 6:30 p.m. to discuss Articles received by the Board of Selectmen to be included on the Town Meeting Warrant. The Chair indicated that she would be out of town, but had asked whether the meeting could be moved to July 22.

Additionally, the Chair attended the Public Hearing for the Bylaw Review Committee, who would be proposing 31 Articles to the Board of Selectmen. The Chair requested a copy of the Articles from the Committee and the Town Manager, to review at tonight's meeting, but the information was not provided. Mr. Balzarini inquired whether the Planning Board would need to hold public hearings for the bylaws but the Chair believed they were not all zoning articles. The Chair indicated that the Bylaw Review Committee's April 30 minutes indicated a listing of the Articles, noting that it appeared Zoning Articles had been placed on hold. Section 2-1 appeared to change the October Town Meeting deadline to submit Articles from the second Monday in July to the second Monday in August, but the

Chair expressed concern that it would not allow for sufficient time to properly review proposed Zoning Articles, similar to what happened last year.

MOTION: Mr. Balzarini made a motion to maintain the second Monday of July as the deadline for proposed Articles amending the Zoning Bylaw. Mr. Cummings seconded the motion. All voted unanimously.

The Chair will draft a memo. Mr. Balzarini suggested requesting a policy, with the Board of Selectmen, that Zoning Articles be received by the Planning Board one month prior to the July deadline, for Planning Board review.

MOTION: Mr. Balzarini made a motion that proposed zoning amendments by other staff and Boards be received one month in advance. Mr. Cummings seconded the motion.

Mr. Lehrer stated that the timelines for Zoning submissions were mandated by the statutory Zoning Act and the motion would request greater notice than was needed by State law. The Chair stated that Warrant Articles submitted to the Board of Selectmen should be provided to the Planning Board within 14 days of submission to the Board of Selectmen. Mr. Phelan suggested that, rather than making a motion, the Planning Board could discuss their request with the Board of Selectmen, particularly as it could not be changed for this year. The Chair indicated that the Bylaw Review Committee did not request Public Comment, but the Chair inquired and found that the Committee would not commit to informing the Planning Board. The Chair noted that Mashpee should be working together. Mr. Balzarini agreed with discussing the matter with the Board of Selectmen.

Mr. Balzarini rescinded his motion and Mr. Cummings rescinded his second.

Mr. Phelan will speak with the Board of Selectmen regarding the Planning Board's request and Mr. Balzarini and Mr. Cummings would also attend the meeting on July 15. The Chair asked that any changes to the meeting time be shared with the Board.

BOARD MEMBER COMMITTEE UPDATES

Cape Cod Commission-Mr. Callahan reported that the Comprehensive Economic Development Strategy had set their strategy for the next five years. The Chair asked Mr. Lehrer to copy all Board members on Cape Cod Commission emails.

Community Preservation Committee-The Chair reported that the CPC had finalized their memo for the Board of Selectmen regarding the 3% surcharge discussion. The CPC identified that there continued to be a need for affordable housing, historic preservation, open space and recreation in Mashpee. It was determined that the 3% surcharge would continue until it competed with other financial needs of the Town, such as wastewater management. It was noted that, after 2020, a Cape Cod town could opt out of the Land Bank.

Design Review Committee-No meeting

Plan Review-No meeting

Environmental Oversight Committee- No meeting

Greenway Project & Quashnet Footbridge-No update

Historic District Commission- No meeting

MMR Military Civilian Community Council-MMR Joint Land Use Study-Mr. Phelan was continuing to research the organization further. Mr. Lehrer stated that he would follow up with Joint

Base Cape Cod for more information. It was believed that the name had changed to Community Advisory Council and who met 3-4 times per year.

UPDATES FROM TOWN PLANNER

Mr. Lehrer expressed thanks for the Board's work on the ADU Bylaw.

ADDITIONAL TOPICS

ADJOURNMENT

MOTION: Mr. Balzarini made a motion to adjourn. Mr. Callahan seconded the motion. All voted unanimously. The meeting adjourned at 8:00 p.m.

Respectfully submitted,

Jennifer M. Clifford
Board Secretary

DEFINITIVE PLAN CHECKLIST

Applicant: Mark and Donna Lopez

Subdivision Name: N/A

Location: 103 Meetinghouse Road, Mashpee, MA

Date: June 6, 2019

- X Application Form C (in triplicate).
- X Submission of Required Planning Board Fees (see fee schedule):
  - Filing fee: $20 per lot, minimum $200
  - Review fee: $300 + 15 per lot
  - Inspection fee: $250 + $.50 / linear feet of roadway
  - Re-Inspection fee: $100 per inspection
- X Copies of a) most recent recorded deed and b) tax bill or Assessor's certification.
- X Submission of Covenant form/documentation.
- X Form N: Notice of Filing of Plan to Town Clerk.
- X Original drawing of Definitive Plan plus 6 copies, dark line on white background with perimeter dimensions of 24"x36."
- X Road profiles (3 copies drawn on plan/profile paper with perimeter dimensions of 24"x36").
- N/A Water Quality Report (3 copies) for subdivisions of 6 lots or more.
- X List of all abutters within 300 feet from Mashpee Assessors, including 2 sets of mailing labels (check the abutters list to ensure all correctly identified parcels have been selected).
- X Written proof of submittal to Board of Health.
- X Minimum frontage.
- X Minimum lot area.
- X Name of owner, applicant (if different from owner), and engineer or surveyor.
- X Signature and seal of Registered Civil Engineer or Registered Land Surveyor.
- X North point, date, scale, legend.
- X Zoning district(s) in which the subject property lies.
- X Assessors reference, Map and Block numbers.
- X Names and addresses of all abutters as determined from the most recent tax list.
- X Existing and proposed lines of streets, ways, lots, easements, and public or common areas within the subdivision. (Lines must be indicated by bearings referred to the Massachusetts Coordinate System where control points on that system are available within 1000 feet of locus.)
- X Proposed names of new streets, names of existing streets labeled public or private.
- X Lot numbers, dimensions, and area, (registered land must use a numbering system approved by the Land Court).
- X Proposed street (postal) numbers for each lot in accordance with the street number plans of the Town of Mashpee.
- X Length and direction of streets, the length and radii, tangents, and angles of all curves, together with the width of streets and ways.
- X Location of all permanent monuments properly identified as to whether existing or proposed.

X Proposed layout of storm drainage, water supply, and sewer systems, their appurtenances and all easements thereto.

X Location of all swamp, marsh, low land and other low lying areas, and where the subdivision is adjacent to or affected by tidewater, it shall show 2 foot contours with mean high water in such area.

X Title block in the lower right-hand corner of the drawing with subdivision name and title "Definitive Subdivision Plan."

X ¾ inch border.

X 3 ½ inch square reserved for use by the Registry of Deeds.

X Area reserved for Planning Board's endorsement of approval under the subdivision control law.

X Certification by plan preparer that the rules and regulations of the Registers of Deeds have been conformed to in preparing the plan.

X If applicable, lettering in a location adjacent to the Board's approval as follows:

"This plan subject to covenant dated _____ and attached hereto."

X Certification block for Mashpee Town Clerk for twenty day appeal period following plan approval.

X If the plan is submitted under the cluster development exception of the Mashpee Zoning Bylaws, the formula for determining the total number of lots allowed must be shown as follows:

Total Area:		284,184
Less:	Water bodies and wetlands as defined under MGL C. 131, Section 40	0
	Area of existing and proposed Streets, roadway rights-of-way or easements of 20 feet or more in width	17,157
	Overhead utility rights-of-way or easements 20 feet or more in width	0
	Total area excluded:	17,157
Allowable Area:		267,027
Lot Area Required:		133,513.5
Number of Lots Permissible:		3

X Locus map at a scale of 1 inch = 2000 feet.

X Existing and proposed contours at 2 foot intervals.

X Digital submission of plans on diskette(s) or CD.

COMMENTS

TABLE OF CONTENTS

1.0 OVERVIEW

1.1 Introduction

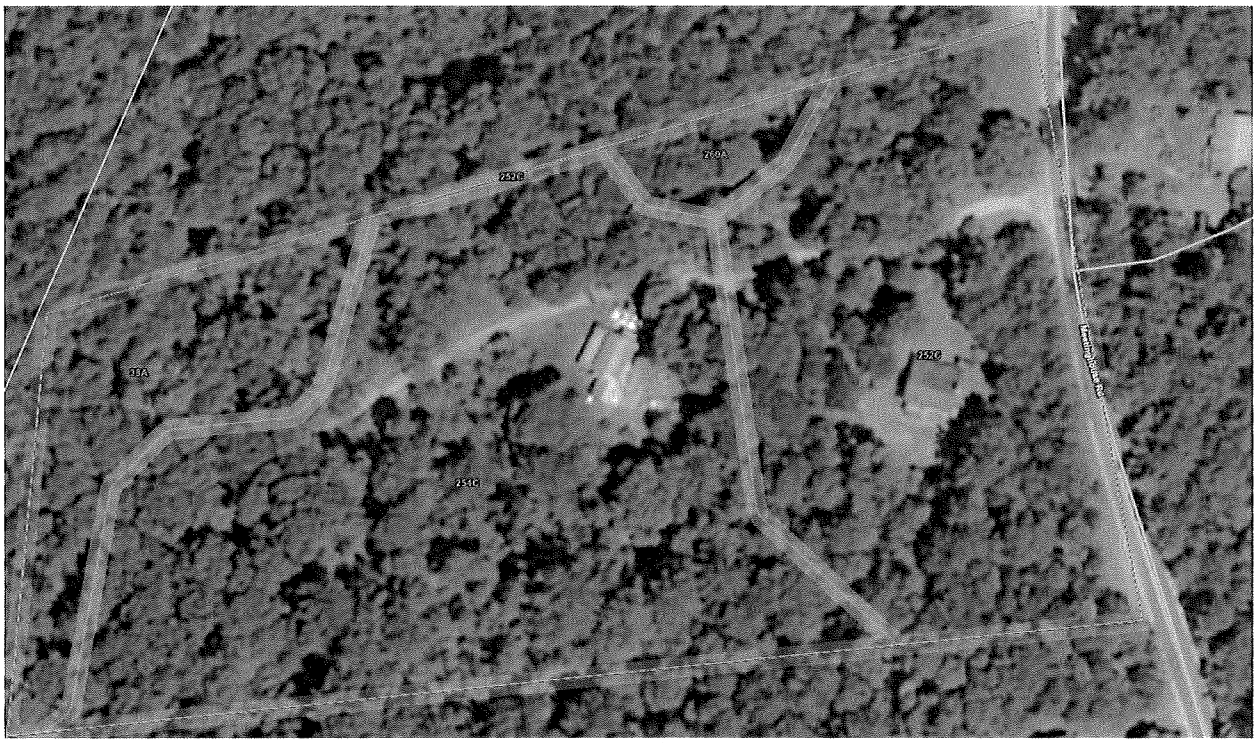
Cape & Islands Engineering, Inc. submits this stormwater report and analysis on behalf of the applicant and property owners, Mark and Donne Lopez who propose to improve the existing gravel ancient way at 103 Meetinghouse Road in Mashpee, MA. The project consists of constructing a 20' wide gravel road surface to access the proposed subdivision lots. The property contains approximately 6.5 acres in area. The land will be subdivided into three (3) buildable parcels, two (2) Open Space parcels and 740 feet of roadway improvement. The work for the roadway is required to provide adequate access to several parcels. The roadway improvements include a stormwater management system to manage storm runoff produced within the development.

This report describes the hydrologic and hydraulic analysis associated with stormwater runoff for the proposed development and the operation and maintenance requirements for the proposed stormwater treatment. This report accompanies a set of drawings (Plan) that represent the proposed site development improvements and stormwater treatment system, and a set of calculations (enclosed) identifying the stormwater runoff volume and capacity analysis of the receiving facilities. Also included are drainage system recommended Inspections, Operation and Management tasks and procedures.

2.0 BACKGROUND

2.1 Existing Conditions

The site is currently an ancient 10' wide gravel way serving several residences. The majority of the land in the vicinity of the roadway is considered woodland. Residential developments exist along the southern side of the roadway (see aerial image below). The existing vegetated nature of the property produces insignificant contribution of storm runoff flow or volume to offsite areas. Some existing depressions also retain surface runoff within the property.



USDA Web Soil Survey Aerial Image – image depicting land soil classifications

2.2 Site Characteristics

The general location of the property lies within a geologic formation known as a glacial outwash plain where the subsoils are commonly found to be sand texture material. The Soil Survey of Barnstable County, Massachusetts issued by the United States Department of Agriculture in March 1993 classifies the soils as Merrimac fine sandy loam and Carver coarse sand for the improvement area of the ancient way. The soil parent material for these soils is sand texture. There are no wetlands within 100 feet of the proposed roadway improvements.

The geology of the site has been classified with hydrologic soil group A and drainage class of somewhat excessively to excessively drain soils. Within the substratum sand texture soil, the Soil Survey of Barnstable County indicates infiltration rates as high as 99.9 inches per hour (Refer to enclosed Web Soil Survey Recap). Infiltration rate is the measurement of water flowing through a saturated soil medium. Soil tests performed at the property found medium sand texture soils at a depth of 36-inches with an assigned percolation rate of less than 2-minutes per inch (30 inches per hour). The topography surrounding the existing ancient way directs surface runoff in a northerly pattern. Adjacent areas south of the existing ancient way (including the majority of the two developed residential parcels) flow in a westerly pattern reaching an existing land depression. As is typical for developments in this area the type of existing soils are used to manage storm runoff volume, as these soils are more than adequate to dispose of stormwater runoff volumes with subsurface leaching systems.

3.0 PROPOSED STORMWATER MANAGEMENT SYSTEM

3.1 Scope of Work

The project pertaining to this stormwater report consists of improving the existing 10' wide ancient way by providing 20' width of gravel surface for approximately 740 feet. The proposed improvement is essentially duplicating the width of the existing gravel roadway. Along the entire northern edge of the improved roadway a proposed drainage swale intercept and manages surface runoff. Existing topography and final grading is proposed to generally remain the same with no changes to surface runoff patterns other than the interception of roadway surface runoff by the proposed drain swales. Intercepted surface runoff will be allowed to infiltrate through the surface soils of the drain swales.

Surface runoff patterns affected by the proposed improvements consist of two (2) primary contributing sub-areas (east 'A' and west 'B' - refer to enclosed contributing drainage area graphic). Within these drainage areas site grading is designed to direct the flow into drainage swales shaped along the shoulder of the roadway. These systems will collect surface runoff and provide groundwater recharge through soil infiltration. Whenever the storm runoff volume exceeds the control levels the drainage swales will allow a discharge through overflow stone lined weirs. The volume discharged through these outflows are kept below pre-development condition runoff volumes.

The proposed stormwater system provides total suspended solids (TSS) removal and groundwater recharge within the development (refer to calculations below). The system shall be maintained and inspected in accordance to the Operation and Management Plan (O&M) provided in this report for the proper operation of the stormwater system.

3.2 Proposed Drainage Systems

The proposed stormwater management system design consist of shaping the roadway shoulder for a shallow 12 to 18 inches drainage swales built 5.5' wide. The roadway improvements do not generate a significant increase in storm surface runoff discharge rate or storm runoff volume. The capacity of the swales is adequate to manage site storm runoff (refer to enclosed calculations) maintaining adequate offsite storm runoff rates and runoff volume. Ultimately soil infiltration is the final discharge means for the majority of storm events through the proposed design.

4.0 STORMWATER DESIGN CALCULATIONS

4.1 Design Calculations

The proposed drainage system is designed to manage the storm runoff volume in accordance to professional engineering practices and acceptable standards.

The calculations enclosed are based as analyzed with the computer program HydroCAD:

1. 2-year 24-hour and 10-year 24-hour for full storm runoff volume containment (no discharge)
2. 25-year 24-hour and 100-year 24-hour for prevention of offsite volume flooding impacts
3. Drain swale system analyzed with an assigned infiltration rate of 2.41 inches per hour

Refer to Enclosed HydroCAD Calculations

4.2 Stormwater Quality and Quantity

The stormwater treatment systems, as described above, will intercept stormwater runoff for the proposed development. Although the gravel roadway is not entirely impervious surface, for the purpose of a quality volume analysis this are the areas used to analyze the quality volume storage provided with the drain swales. The equivalent quality and quantity storm volume calculated for this analysis is one (1) inch over the proposed main gravel roadway areas as follows:

Gravel driveway area for contributing drainage area A = 500 feet x 20 feet = 10,000 square feet
Quality and Quantity Volume = 10,000 square feet x 1 inch x (1 feet/12 inches) = 833 cubic feet
Swale Holding Capacity at a depth of eight (8) inches = 834 cubic feet

Gravel driveway area for contributing drainage area B = 280 feet x 20 feet = 5,600 square feet
Quality and Quantity Volume = 5,600 square feet x 1 inch x (1 feet/12 inches) = 467 cubic feet
Swale Holding Capacity at a depth of nine (9) inches = 503 cubic feet

The water quality volume calculated as one inch (1") over the gravel area noted above is contained within the holding capacity of the proposed swale system at depths below nine (9) inches.

Although infiltration capacity is not considered in the calculation above, the drainage swales have enough surface area and provide a soil texture that allows infiltration of the quality volume contained in less than 72-hours. The volume drawdown time is calculated by allowing the swale bottom area to infiltrate the water at an assigned infiltration rate. Based on the anticipated soils, the assigned saturated hydraulic conductivity (Ks) of 2.41 in/hr from the recommendations published in Rawls table for loamy sand texture soils is used. The table below illustrates the time for the quality volume to completely dissipate from the swale confirming a drawdown time less than the maximum recommendation of 72-hours:

Drawdown time = (quality volume / leaching area) / (infiltration rate) x (units conversion factors)

	Drainage Area 'A'	Drainage Area 'B'
Total Bottom Swale Area	= 920 square feet	500 square feet
Quality and Quantity Volume	= 833 cubic feet	467 cubic feet
Drawdown time	= 4.5 hours	4.7 hours

4.3 Total Suspended Solid Analysis

The proposed drainage system will improve runoff water quality by removing approximately 80% of the Total Suspended Solids (TSS). TSS removal is accomplished by way of vegetated swale providing filtration to the stormwater runoff allowing for suspended soils removal along with subsurface leaching systems to further reduce total suspended solids.

Starting TSS load at first BMP for any system set at 1.00

1. Surface Swale (SS) = 80% assigned removal rate

BMP	Removal rate	Starting TSS	Removed TSS	Remaining TSS
SS	80	1.00	0.80	0.20

5.0 RECOMMENDED O&M

5.1 Construction period controls

Proper control measures during the construction stages of this project are needed to prevent erosion and sedimentation problems. Open excavation and piled material and equipment shall be properly managed to avoid conditions that may result detrimental to the project. Refer to the Plan details for the proposed erosion and sedimentation measures during the construction period.

The Erosion and Sedimentation Control Plan includes the following:

1. The Installer shall examine the work area and site conditions under which this work is to be performed prior to installation of sedimentation and erosion control.
2. The contractor shall establish the limit of work (construction or silt fence) as indicated in the Construction Drawings and maintain the limit of work in good conditions throughout the duration of the work.
3. All excavated areas rendering a slope greater than 3 horizontal to 1 vertical (3:1) shall be stabilized with the installation of erosion control blankets.
4. All unsuitable and excess material not intended for reuse or re-purpose within the site shall be stripped from areas impacted by construction and disposed off-site.
5. Excavated material or imported material shall not be piled in areas where sediments may damage stormwater system on the site.
6. The Contractor shall remove all construction debris for disposal from the site and properly transport to an approved disposal location.
7. After every rainstorm the Contractor shall examine the conditions of all the erosion and sedimentation controls and perform any required repairs or replacements.
8. The Contractor shall maintain on site 200 linear feet of *extra* silt fence in the event erosion occurs and immediate action is necessary. If erosion occurs during construction the Contractor shall take immediate steps to contain material on site an prevent future erosion.
9. Stabilization for construction of the driveway shall be achieved by installing the gravel base immediately after the rough grading and sub-base compaction is complete.
10. The Contractor shall avoid smearing the bottom levels of the excavation and the exposed excavation face walls for subsurface leaching systems. The contractor shall scarified any areas where smearing occurs to provide adequate filtration through the soils.
11. All protective measures (silt sacs, silt fences, and hay bale) installed on site or in the catch basins within the site shall be removed once the site work is complete and the disturbed areas are stabilized.

5.2 Operation and Maintenance Plan

A properly operating drainage system is the basis for long life of the roads and for the protection of adjacent properties against stormwater impacts. If the drainage system fails to work, frequent pooling of stormwater would be expected to occur within the site leading to saturation of the gravel base and shortening the life expectancy of the site improvements. The owner or designated representative will be responsible for maintenance and operation of drainage system. A copy of the Site Plan suffice as means of illustration of the location of the stormwater system, or other drawings depicting the site with all components of the drainage system.

To provide for adequate maintenance of the drainage system, the following inspections and procedures will be required:

1. Inspect system after major storm events (typically a storm of one inch (1") of rainfall) and at least four times a year.
2. All debris shall be removed and properly disposed clearing the entire surface of the swales.
3. If standing water is observed above the outlet pipes 24 hours past a storm event inspect the system for the presence of clogging or obstruction. If clogging or an obstacle exists arrange for the system to be cleaned.
4. The swale is considered in failure when pooling occurs three days after a rain event and an investigation has determined that no apparent clogging or obstructions within the drainpipe are present. To repair this situation, a contractor shall be hired to rebuild the same size system within the same location by removing the surface three or four inches of soil and crushed stone and replacing new material in-kind.

6.0 SUMMARY

6.1 Conclusion

The stormwater management system proposed provides protection for the development once constructed. Information as described in this report and within the construction documents submitted is comprehensive and informative enough for a qualified and experienced contractor to properly implement on the ground. Proper maintenance tasks and inspections procedures are recommended and indicated for the contractor to implement during the construction stages. Similarly, recommendations are provided for operation and maintenance of the stormwater management system for longevity and protection of the system as proposed. The design and sizing of the stormwater management system is adequate to manage stormwater runoff on the subject property

FORM D
COVENANT

The undersigned _____ of _____ County, Massachusetts, hereinafter called the "Covenantor," having submitted to the Mashpee Planning Board a definitive plan of a subdivision, entitled _____ dated _____ made by _____, does hereby covenant and agree with said Planning Board and the successors in office of said Board, pursuant to G.L. (Ter. Ed.) C. 41, Sec. 81U, as amended, that:

1. The covenantor is the owner of record of the premises shown on said plan;

2. This covenant shall run with the land and be binding upon the executors, administrators, heirs, assigns of the covenantor, and their successors in title to the premises shown on said plan;

3. The construction of ways and the installation of municipal services shall be provided to serve any lot in accordance with the applicable Rules and Regulations of said Board before such lot may be built upon or conveyed, other than by mortgage deed; provided that a mortgagee who acquires title to the mortgaged premises by foreclosure or otherwise and any succeeding owner of the mortgaged premises or part thereof may sell any such lot, subject only to that portion of this covenant which provides that no lot so sold shall be built upon until such ways and services have been provided to serve such lot;

4. Nothing herein shall be deemed to prohibit a conveyance subject to this covenant by a single deed of the entire parcel of land shown on the subdivision plan or of all lots not previously released by the Planning Board without first providing such ways and services;

5. This covenant shall take effect upon the approval of said plan;

6. Reference to this covenant shall be entered upon such plan and this covenant shall be recorded when said plan is recorded.

The undersigned _____ wife, husband of the covenantor hereby agree that such interest as I, we, may have in said premises shall be subject to the provisions of this covenant and insofar as is necessary release all rights of tenancy by the courtesy, dower, homestead and other interest therein.

EXECUTED as a sealed instrument this _____ day of _____, 20_____.

Mr. Evan Lehrer, Town Planner
Town of Mashpee
16 Great Neck Road North
Mashpee, MA 02649

RE: Application for Approval of Definitive Plan for 103 Meetinghouse Road, Mashpee, MA

Dear Mr. Lehrer:

This letter is in regard the above referenced application.

Please accept this letter as my written authorization to allow Matthew C. Costa, P.L.S., President, Cape and Islands Engineering, Inc. and/or his Associates to represent this Approval of Definitive Plan on my behalf.

If you have any questions, please feel free to contact me at 774-521-7026.

Sincerely,

Mark and Donna Lopez
103 Meetinghouse Road
Mashpee, MA 02649
774-521-7026

BOOK 3183 PAGE 272 27153

VINCENT C. LOPEZ and CAROL A. LOPEZ, husband and wife, both

of Mashpee, Barnstable County, Massachusetts for nominal non-monetary consideration paid

grant to MARK V. LOPEZ and DONNA JEAN LOPEZ, husband and wife, as joint tenants,

of 497 Hatchville Road, Hatchville, Massachusetts 02536 with quitclaim covenants

A certain parcel or lot of land in the Town of Mashpee, Barnstable County, Massachusetts on the westerly side of Meetinghouse Road and the easterly side of the Mashpee River, shown as Parcel "B" on a plan entitled, "Division Plan of Land in Mashpee, Mass. showing Parcel B. which is to be conveyed to Donna J. Lopez from Vincent C. Lopez, Scale: 1" = 60', August 13, 1980, Doyle Associates, Falmouth, Mass." to be recorded herewith to which plan reference is made for a more particular description, Reference PLAN BOOK 347, PAGE 39.

There is conveyed appurtenant to said Parcel "B" the right to pass and repass along the Ancient Way shown over both of Parcel "A" shown on said plan to the Meetinghouse Road.

For title see deed of Violet E. Salmon to us dated September 10, 1959 and recorded at the Barnstable County Registry of Deeds Book 1056, Page 462.

Executed as a sealed instrument this 16th day of October 1980

Vincent C. Lopez

Carol A. Lopez

Atlantic Project No. 3110.00

TABLE OF CONTENTS

APPENDICES

1.0 INTRODUCTION

This report analyzes the hydrological impacts of the proposed Cape Cod Coffee facility. Presently, the site is a wooded lot with flat topography. The project proposes a 2-story building, paved parking with curbing/berm, landscaping, recreational amenities, septic system, water, utilities and stormwater facilities. The use of the building will be a coffee shop that will include the processing, distribution and packaging of coffee as well as a shared industrial use tenant.

2.0 PROPOSED STORMWATER MANAGEMENT SYSTEM

The Stormwater system for the project has been evaluated and designed based upon DEP Stormwater Policy as well as the Stormwater Management Section of the 2018 Town of Mashpee Zoning Bylaws (§174-27.2).

Stormwater runoff from the proposed development will be directed to a closed drainage system consisting of deep sump hooded catch basins and manholes that discharge to an open vegetated basin that incorporates sediment forebays, infiltration, and subsurface leaching fields comprised of concrete galleys.

As indicated in the Post-Development watershed plan, stormwater runoff from subcatchment 1S (the majority of the site) will drain to catch basins and then be conveyed to sediment forebays before overflowing into the infiltration basin. The infiltration basin will include an outlet structure consisting of an 18" diameter riser pipe that is routed to an underground leaching system sized to handle up to the 100 year storm event. A closed roof drain system along the perimeter of the building will handle the routing of the roof runoff (subcatchments RD-1, R-2 and RD-3) to three underground leaching systems which have been sized to handle the 100 year storm event.

3.0 COMPLIANCE WITH STORMWATER MANAGEMENT STANDARDS

Standard 1: No New Untreated Discharges

No Wetlands are located on or near the site and all new applicable impervious surfaces are being treated before infiltrating into the groundwater. Based on this it is our opinion that this standard has been met. The following structures have been incorporated to improve water quality prior to discharge:

- Catch basins with 4-foot sumps and hoods to settle out sediment and minimize oils entering system
- Forebays sized to accommodate the first flush volume (one inch over the impervious areas of the site).
- Infiltration basin and leaching fields sized to accommodate the 100-year design storm

Standard 2: Peak Rate Attenuation

The proposed infiltration basin and leaching fields have been designed to accommodate and contain on-site all of the runoff from the 100-year design storm for the developed areas of the site. Therefore there will be no increase in runoff to abutting properties. Note that the basins have been conservatively sized by not taking credit for infiltration within the forebays.

Standard 3: Groundwater Recharge

Test pits have been performed on-site and sandy soils were witnessed in the C2 and C3 horizons as seen in the test results (see Appendix D). The infiltration basin and leaching fields were located in these horizons. The infiltration rate used is based on the MASS DEP standard RAWLS rate for sandy soils and therefore Hydrologic Soil Group A has been selected. The groundwater recharge volume required for the proposed impervious surfaces is calculated by the following formula:

$$R_v = (F)(A_{IMP})$$

R_v = Required Recharge Volume
F=Target Depth Factor: 0.60 inch
A_{IMP} = Proposed Impervious Area
(A Target Depth Factor of 0.6 has been applied over the entire site as a conservative approach)

The total impervious areas associated with the site development (not including roof areas) approximately 27,893 sq ft. Based on the recharge rate of 0.6 inches of runoff over the entire impervious area, approximately 1,395 cubic feet of recharge volume is required. This volume is provided in the basin and leach field which are capable of storing (and recharging) more than 8,275 cubic feet of runoff.

Standard 4: Water Quality

The project has been designed with structures to remove total suspended solids (TSS) prior to discharge. Together with regular maintenance of the project as described in the Operation and Maintenance plan, the TSS removal will exceed the 80% removal required by the Stormwater Management Standards, as well as the requirement to remove 44% TSS prior to discharge to an infiltration basin in soils with rapid infiltration. The proposed TSS removal provided by the BMP structures (and street sweeping) is summarized in the TSS Removal Table in Appendix C.

Two sediment forebays have been sized to provide Water Quality Volume for 27,893 SF of impervious surface. The required Water Quality Volume is as follows:

$$V_{WQ} = (1\ in/12in/ft)*(27{,}893\ SF)$$

$$V_{WQ} = 2{,}324\ CF$$

The required Water Quality Volume is provided within the sediment forebays, which have a total volume of 2,377 cf (see calculations in Appendix C). As a result, it is our opinion that Standard 4 has been met.

Standard 5: Land Uses with Higher Pollutant Loads (LUHPPLs)

The proposed development is not a LUHPPL and therefore Standard 5 is not applicable.

Standard 6: Critical Areas

The project does not have any discharges within a Zone II, Interim Wellhead Protection Areas or near or to any Critical Areas as defined by the Massachusetts Stormwater Handbook. Therefore, it is our opinion that Standard 6 is not applicable.

Standard 7: Redevelopment Projects

The proposed project is not a redevelopment project and therefore Standard 7 is not applicable.

Standard 8: Construction Period Pollution Prevention and Erosion and Sedimentation Control

Construction Period Erosion and Sedimentation Control notes are provided on the Site plans along with notes/instructions for the contractor and details/location of all erosion control measures. The project will be covered under a NPDES CGP and a SWPPP will be submitted before land disturbance begins.

Standard 9: Long Term Operation and Maintenance Plan

A Stormwater Operation and Maintenance Plan is provided in Appendix D.

Standard 10: Prohibition of Illicit Discharges

To our knowledge, there are no existing illicit discharges to existing stormwater systems on the Site and measures to prevent illicit discharges from the proposed development to proposed stormwater systems on the Site is included within the Long Term Pollution Prevention Plan. As required, the Illicit Discharge Compliance Statement will be signed by the Responsible Party prior to the start of construction.

APPENDIX A

Post Development HydroCAD Stormwater Analysis

APPENDIX B

Post-Development Watershed Plan

APPENDIX C

Miscellaneous Calculations

Required Recharge Volume

Design Engineer:	Atlantic Design Engineers, INC	Job No.:	3110.00
Project Name:	10 Evergreen Circle	Calc'd By:	PMJ
Location:	Mashpee, MA	Date:	1/11/2019

The groundwater recharge volume is required for the proposed **impervious** surfaces.

Rv = (F) (Aimp)
Rv = Required Recharge Volume
Aimp= Impervious Area on site
F = Target Depth Factor: 0.60 inch for A soils

Subcatchment Area: 1S

Impervious Area=	27,893	sf			
Required Recharge Volume (Rv)=	27,893	* 0.60" * (1/12)=	1394.65	cf	
Volume Provided in stormwater BMP=			8275.00	cf	Infiltration Basin and Leaching Field

Total Required Recharge Volume on Site=	**1394.65**	**cf**	
Total Recharge Volume Provided in stormwater BMPs on Site=	**8275.00**	**cf**	**Standard is Met**

Water Quality Calulation Sheet

Design Engineer:	Atlantic Design Engineers, INC	Job No.:	3110.00
Project Name:	10 Evergreen Circle	Calc'd By:	PMJ
Location:	Mashpee, MA	Date:	6/21/2019

The required water quality treatment volume is calculated as follows:

Vwq = (Dwq)*(Aimp)
Vwq =Required Water Quality Volume
Dwq =Water Quality Depth = 1.0" (Per Local Requirements)
Aimp=Area of New Impervious

Subcatchment Area: 1S (Northern)

Total Impervious Area for the Subcatchment=	16,400	sf			
Water Quality Volume Required (Vwq)=	16,400	* 1.0" * (1/12)=	1,367	cf	
Volume Provided=			1,377	cf	in Forebay 1A
Volume Required=	1,366.7	<	1,398		**Water Quality Volume is met**

Subcatchment Area: 1S (Southern)

Total New Impervious Area for the Subcatchment=	11,493	sf			
Water Quality Volume Required (Vwq)=	11,493	* 1.0" * (1/12)=	958	cf	
Volume Provided=			979	cf	in Forebay 2A
Volume Required=	958	<	979		**Water Quality Volume is met**

Total New Impervious Area on the Site=	27,893	sf	
Total Volume Quality Required=	2,324	cf	
Total Volume Provided=	2,377	cf	**Standard is Met**

TSS REMOVAL CALCULATION SHEET (PRE-TREATMENT)

Design Engineer:	Atlantic Design Engineers, LLC	Job No.:	3110.00
Project Name:	10 Evergreen Circle	Calc'd By:	PMJ

APPENDIX D

Stormwater Operation and Maintenance Plan

STORMWATER OPERATION & MAINTENANCE PLAN

Cape Cod Coffee
10 Evergreen Circle,
Mashpee, Massachusetts

June 21, 2019

EROSION CONTROL FACILITIES

Erosion Control Barriers:

Erosion Control Barriers (sediment logs, haybales, silt fence, etc.) should be inspected immediately after each run-off producing rainfall event and at least daily during prolonged rainfall. Sediment deposits must be removed when the level of deposition reaches approximately one-half the height of the barrier. Sediment should be disposed of in a suitable area and protected from erosion by either structural or vegetative means.

Construction Entrance/Tracking Pad:

The construction entrance tracking pads should be maintained in a condition that will prevent tracking or flow of sediment onto the public right-of-way. This may require periodic topdressing with additional stone. The entrance pad should be inspected weekly at a minimum, after major storm events (2" or greater) and during periods of heavy use. When mud and soil particles clog the voids in the gravel, the pad should be top dressed with new stone or replaced completely.

Catch Basin Inlet Protection:

All catch basins shall be provided with inlet protection consisting of pre-manufactured "silt-bag" catch basin inlet sediment collection systems until pavement base course is in place and the contributing drainage area to the inlet is stabilized. Inspect the inlet protection device weekly at a minimum, and after major storm events (2" or greater) throughout construction. Repairs are to be made as required and sediment must be removed when the level of deposition reaches approximately one-half the height of the haybale dike or as specified by the "Silt Bag" manufacturer.

STORMWATER BEST MANAGEMENT PRACTICES (BMPs)

Street Sweeping:

All paved areas should be swept twice a month during construction and two times per year during the early spring and late fall seasons after construction.

Deep Sump Hooded Catch Basin:

Inspect Monthly (Minimum), or after major storm events (2" or greater) during and after construction for excessive accumulation of sediments trash. Clean sumps semiannually or when sediment reaches 18", whichever occurs first. All catch basins shall be provided with haybale dikes or pre-manufactured "silt-bag" catch basin inlet sediment collection systems until base course is in place. Inspect weekly and after major storm events (2" or greater) throughout construction.

Forebay:

Inspect monthly at a minimum, or after major storm events (2" or greater) during and after construction for erosion, excessive accumulation of sediment and trash. Repair eroded spots immediately after inspection. Accumulated sediment shall be removed at least four times a year or before it exceeds 0.5' in depth, whichever occurs first. Sediment shall be disposed of in a suitable area and protected from erosion by either structural or vegetative means.

Infiltration Basin:

Inspect after every major storm event (2" or greater) during construction and for the first few months after construction to ensure proper stabilization and function. Thereafter, inspect at least once per year during wet weather to ensure the system is draining properly. Check for accumulation of sediment and ponding water. If ponding water is visible inside the system for several days after a storm event, notify the engineer for possible remedial measures. Remove sediment as necessary during construction, while the system is dry, and at least every five years after construction.

At least two times during the growing season, mow upper-stage, side slopes and embankment. The grass should not be cut lower than 4", remove trash, grass clippings, organic matter and derbris.

Infiltration/Leaching Galleys:

Inspect after every major storm event (2" or greater) during construction and for the first few months after construction to ensure proper stabilization and function thereafter, inspect at least once per year during wet weather to ensure the system is drained properly- check for accumulation of sediment and ponding water. If ponding water is visible inside the system for several days after a storm event, notify the engineer for possible remedial measures. Remove sediment as necessary during construction, while the system is dry, and at least every 5 years after construction.

STORMWATER OPERATIONS AND MAINTENANCE NOTES

1. The contractor shall be responsible for the proper inspection and maintenance of all stormwater and erosion control facilities until the project construction is completed. The contractor shall clean all components of the stormwater management system and sweep all paved areas at the completion of construction, immediately prior to turning over operation and maintenance responsibility to the owner.
2. Upon completion of construction, the operation and maintenance of all components of the stormwater management system will be the responsibility of the developer:

   Modi, LLC.
   348 Main Street
   Mashpee, Massachusetts 02649

3. Disposal of accumulated sediment and hydrocarbons to be in accordance with applicable local, state and federal guidelines and regulations.
4. The contractor shall be responsible for cleaning all components of the stormwater management system and sweeping all paved areas.
5. There shall be no illicit discharge of any waste or waste water into the stormwater management system. The maintenance of the facility shall be undertaken in such a manner as to prevent any discharge of waste or waste water into stormwater management system. Any waste products generated during maintenance shall be properly disposed of off-site.

CONSTRUCTION NOTES:

1. ALL PROPOSED DRAINAGE PIPING SHALL BE 12" ADS UNLESS OTHERWISE NOTED AND ALL WATER MAINS, SERVICES AND APPURTENANCES SHALL BE INSTALLED PER THE WATER DISTRICT SPECIFICATIONS AND OR REGULATIONS.
2. CONTRACTOR SHALL VERIFY ALL EXISTING CONDITIONS SHOWN AND NOTIFY THE ENGINEER OF ANY DISCREPANCIES PRIOR TO BIDDING.
3. CONTRACTOR SHALL VERIFY ALL CRITICAL ELEVATIONS AND INVERTS PRIOR TO CONSTRUCTION.
4. WHERE AN EXISTING PUBLIC UTILITY IS FOUND TO CONFLICT WITH THE PROPOSED WORK, THE LOCATION, ELEVATION AND SIZE OF THE UTILITY SHALL BE ACCURATELY DETERMINED AND THE INFORMATION FURNISHED TO THE TOWN FOR RESOLUTION OF THE CONFLICT.
5. SUBSURFACE AND ENVIRONMENTAL CONDITIONS WERE NOT EXAMINED OR CONSIDERED AS PART OF THIS SURVEY. NO STATEMENT IS MADE CONCERNING THE EXISTENCE OF UNDERGROUND OR OVERHEAD CONTAINERS OR FACILITIES THAT MAY AFFECT THE USE OR DEVELOPMENT OF THIS TRACT.
6. ALL BUILDINGS, AND SURFACE AND SUBSURFACE IMPROVEMENTS ON AREAS ADJACENT TO THE SITE ARE NOT NECESSARILY SHOWN HEREON.
7. THE LOCATION OF EXISTING UNDERGROUND UTILITIES ARE SHOWN IN AN APPROXIMATE WAY AND HAVE NOT BEEN INDEPENDENTLY VERIFIED BY THE OWNER OR ITS REPRESENTATIVE. THE CONTRACTOR SHALL DETERMINE THE EXACT LOCATION OF ALL UTILITIES AND RIM AND INVERTS BEFORE COMMENCING WORK, AND AGREES TO BE FULLY RESPONSIBLE FOR ANY AND ALL DAMAGES THAT MIGHT OCCUR BY THE CONTRACTOR'S FAILURE TO EXACTLY LOCATE AND PRESERVE ANY AND ALL UNDERGROUND UTILITIES
8. IT IS THE CONTRACTOR'S RESPONSIBILITY TO NOTIFY DIGSAFE, THE TOWN OF MASHPEE HIGHWAY DEPARTMENT, AND ALL UTILITY COMPANIES A MINIMUM OF 72 HOURS PRIOR TO CONSTRUCTION ACTIVITIES FOR LOCATION OF ALL UNDERGROUND UTILITIES AND UTILITY COMPANY AND DPW APPROVALS.
9. ELECTRIC, TELEPHONE, AND CABLE SHALL BE PLACED UNDERGROUND IN ACCORDANCE WITH THE REQUIREMENTS OF THE UTILITY COMPANIES. REFER TO PLANS BY OTHERS IN CONJUNCTION WITH THE UTILITY COMPANIES FOR LAYOUT OF RESPECTIVE UTILITY SYSTEMS.
10. SLOPES ON ALL PIPES ARE APPROXIMATE. CONTRACTOR TO HOLD INVERTS FOR CONSTRUCTION.
11. THE CONTRACTOR SHALL MAKE ALL ARRANGEMENTS FOR THE ALTERATION AND ADJUSTMENTS OF GAS, ELECTRIC, TELEPHONE AND ANY OTHER PRIVATE UTILITIES WITH THE UTILITY COMPANY, IF NECESSARY. IF ANY INTERRUPTIONS IN SERVICE ARE NECESSARY TO ABUTTING PROPERTY OWNERS, A MINIMUM OF 48 HOURS NOTICE SHALL BE GIVEN.
12. CONTRACTOR SHALL PROVIDE TRAFFIC CONTROL MEASURES IN ACCORDANCE WITH THE MANUAL OF UNIFORM TRAFFIC CONTROL DEVICES FOR ALL WORK WITHIN PUBLIC STREETS.
13. AREAS OUTSIDE THE LIMITS OF PROPOSED WORK DISTURBED BY THE CONTRACTOR'S OPERATION SHALL BE RESTORED BY THE CONTRACTOR TO THEIR ORIGINAL CONDITION AT THE CONTRACTOR'S EXPENSE.
14. ALL SEPTIC SYSTEM COMPONENTS AND DRAINAGE STRUCTURES SHALL BE REQUIRED TO WITHSTAND HEAVY DUTY H-20 LOADINGS.
15. ALL DISTURBED AREA SHALL BE PAVED, LANDSCAPED, OR REVEGETATED WITH 4" (MIN) LOAM AND SEED IMMEDIATELY UPON COMPLETION OF CONSTRUCTION.
16. CONTRACTOR SHALL IMPLEMENT DUST CONTROL MEASURES, INCLUDING WATER TRUCKS THROUGHOUT CONSTRUCTION UNTIL PAVING IS COMPLETED AND ALL SURFACES ARE STABILIZED. DUST CONTROL ADDITIVES SUCH AS CALCIUM CHLORIDE OR SODIUM CHLORIDE SHALL BE USED ONLY WITH PERMISSION FROM THE TOWN.
17. CONTRACTOR IS FULLY RESPONSIBLE FOR COORDINATING WITH AND OBTAINING ALL APPROVALS FROM APPROPRIATE GOVERNING AGENCIES AND UTILITY COMPANIES PRIOR TO, DURING AND AFTER INSTALLATION OF ALL WATER, SEWER, DRAINAGE AND SITE UTILITIES.
18. THE CONTRACTOR IS RESPONSIBLE TO ENSURE THAT ALL REQUIRED INSPECTIONS AND/OR CERTIFICATIONS REQUIRED BY CODES AND/OR UTILITY COMPANIES ARE COMPLETED PRIOR TO INSTALLATION, BACKFILLING, ANNOUNCED BUILDING POSSESSION, AND THE FINAL CONNECTION OF SERVICES.
19. THE CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING ALL SURVEY CONTROL POINTS AND BENCHMARKS NECESSARY FOR THE PROPOSED WORK.
20. THE CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING ADEQUATE RECORDS OF THE LOCATION AND ELEVATION OF ALL WORK INSTALLED.
21. THE CONTRACTOR SHALL INSTITUTE AND MAINTAIN ALL SAFETY MEASURES NECESSARY TO PROTECT THE PUBLIC DURING CONSTRUCTION, INCLUDING, BUT NOT LIMITED TO BARRICADES, SIGNS, FENCES, LIGHTING, POLICE DETAIL, AND ANY OTHER MEANS AS DIRECTED BY THE TOWN. NO TRENCHES ARE TO REMAIN OPEN OVERNIGHT.
22. THE CONTRACTOR SHALL KEEP THE PREMISES FREE FROM THE ACCUMULATION OF WASTE MATERIAL AND OTHER DEBRIS RESULTING FROM THE WORK. AT THE END OF CONSTRUCTION THE CONTRACTOR SHALL REMOVE ALL CONSTRUCTION DEBRIS AND SURPLUS MATERIALS FROM THE SITE. A THOROUGH INSPECTION OF THE WORK PERIMETER IS TO BE MADE AND ALL DISCARDED MATERIALS, BLOWN OR WATER CARRIED DEBRIS, SHALL BE COLLECTED AND REMOVED FROM THE SITE.
23. THE CONTRACTOR SHALL REMOVE ALL VEGETATION, TREES, STUMPS, GRASSES, ORGANIC SOILS, DEBRIS AND DELETERIOUS MATERIALS WITHIN THE AREAS SLATED FOR CONSTRUCTION.
24. THESE PLANS SHOULD NOT BE USED FOR CONSTRUCTION UNTIL ALL REQUIRED APPROVALS HAVE BEEN RECEIVED.
25. ALL WORK SHALL BE DONE IN STRICT COMPLIANCE WITH ALL APPROVED PERMITS AND WITH ALL APPLICABLE NATIONAL, STATE AND LOCAL CODES, STANDARDS, ORDINANCES, RULES AND REGULATIONS.
26. BUILDING FOOTPRINTS SHOWN HEREON WERE PROVIDED BY ARCHITECT.
27. CONTRACTOR SHALL REFER TO ARCHITECTURAL PLANS FOR EXACT LOCATIONS, DESIGN AND DIMENSIONS OF ROOF DRAINS, SEWER, DOMESTIC WATER SERVICE, FIRE SERVICE, GAS, ELECTRIC, TELEPHONE, CABLE UTILITIES, CANOPY DRAINS, FLOOR DRAINS, ENTRANCE/EXITS, STEPS/STAIRWAYS, DECKS, PATIOS, PRECISE BUILDING DIMENSIONS, AND EXACT BUILDING UTILITY ENTRANCE LOCATIONS.
28. ALL DIMENSIONS ARE PERPENDICULAR TO THE PROPERTY LINES.
29. ALL PARKING LOT CURBS ADJACENT TO BUILDING AND ENTRANCES SHALL BE PRECAST OR CAST IN PLACE CONCRETE CURBING AND MINIMUM CURB RADIUS IS 5' UNLESS OTHERWISE NOTED.
30. SEWER, WATER, AND UTILITY BUILDING SERVICES SHOWN ARE APPROXIMATE. REFER TO ARCHITECTURAL PLANS FOR EXACT TIE-IN LOCATIONS. SITE CONTRACTOR IS RESPONSIBLE FOR UTILITY SERVICES TO WITHIN 5' OF THE BUILDINGS.
31. ALL PROPOSED UTILITIES AND APPURTENANCES TO BE CONSTRUCTED TO WITHIN 5' OF THE BUILDING AND IN COMPLIANCE WITH LOCAL MUNICIPALITIES CODES AND REGULATIONS GOVERNING THE INSTALLATION OF SUCH UTILITIES.
32. MINIMUM SIDEWALK GRADES ARE TO BE 1/8" PER FT. SLOPED AWAY FROM THE BUILDING.
33. FINAL DESIGN AND LAYOUT OF GAS AND UNDERGROUND UTILITIES TO BE DESIGNED BY OTHERS IN CONJUNCTION WITH THE UTILITY COMPANIES. SITE CONTRACTOR IS RESPONSIBLE FOR COORDINATION WITH UTILITY COMPANIES AND ALL UTILITY INSTALLATIONS ARE TO BE IN FULL COMPLIANCE WITH ALL THE UTILITY COMPANIES' DESIGN AND SPECIFICATIONS.
34. ALL WATER PIPE AND APPURTENANCES SHALL BE INSTALLED IN ACCORDANCE WITH THE REQUIREMENTS OF THE MASHPEE WATER DEPARTMENT.
35. ALL UNSUITABLE SOIL MATERIALS UNDER ALL INFILTRATION STRUCTURES SHALL BE REMOVED AND REPLACED WITH CLEAN, COARSE, 2 MM/INCH SAND DOWN TO EXISTING SANDY SOIL LAYER.

EROSION CONTROL NOTES

1. PRIOR TO COMMENCING SITE WORK OR EARTHWORK OPERATIONS, INSTALL EROSION CONTROL BARRIER AND MAINTAIN THROUGHOUT ALL CONSTRUCTION.
2. ALL DISTURBED AREAS SHALL BE LOAMED AND SEEDED IMMEDIATELY UPON COMPLETION OF CONSTRUCTION.
3. ALL HAYBALES AND STOCKPILES SHALL BE STORED ON UPLAND AREAS OUTSIDE THE 100 FOOT BUFFER ZONE. STOCKPILES SHALL BE PROTECTED BY HAYBALES, SHALL HAVE SIDE SLOPES NO GREATER THAN 3:1, AND SHALL BE SEEDED OR STABILIZED IF LEFT UNDISTURBED FOR TWO WEEKS OR MORE.
4. SEDIMENTATION CONTROL DEVICES AND EROSION CONTROL BARRIERS SHALL BE INSPECTED WEEKLY AND MAINTAINED AS NECESSARY THROUGHOUT ALL PHASES OF CONSTRUCTION AND PROMPTLY AFTER EACH RAINFALL.
5. ANY SLOPE STEEPER THAN 3:1 SHALL BE EQUIPPED WITH SLOPE STABILIZATION FABRIC OR EROSION CONTROL MATTING.
6. ALL CATCH BASINS SHALL BE PROVIDED WITH HAYBALE DIKES OR PRE-MANUFACTURED "SILT-SAC" CATCH BASIN INLET SEDIMENT COLLECTION SYSTEMS UNTIL BASE COURSE IS IN PLACE. INSPECT WEEKLY AND AFTER MAJOR STORM EVENTS (1" OR GREATER) THROUGHOUT CONSTRUCTION.
7. CONTRACTOR SHALL INSTALL 4" CRUSHED STONE TRACKING PAD AT ENTRANCE PRIOR TO CONSTRUCTION.
8. IF THE SEDIMENT FOREBAYS ARE USED AS TEMPORARY SEDIMENTATION BASINS THROUGHOUT CONSTRUCTION, THEY SHALL BE PERIODICALLY CLEANED DURING CONSTRUCTION, AND AT THE COMPLETION OF CONSTRUCTION. ELEVATIONS SHALL BE CHECKED AND CORRECTED AS NECESSARY.
9. ADDITIONAL EROSION CONTROL MEASURES SHALL BE INSTITUTED AS CONDITIONS WARRANT OR AS DIRECTED BY THE ENGINEER, THE CONSERVATION COMMISSION AND/OR THE PLANNING BOARD.
10. THE CONTRACTOR MUST REPAIR OR RE-SEED ANY AREAS THAT DO NOT DEVELOP WITHIN A PERIOD OF ONE YEAR AT NO ADDITIONAL EXPENSE TO THE OWNER.
11. MATERIAL STOCKPILES SHALL NOT BE LOCATED WITHIN THE PATH OF DRAINAGE OR PROPOSED WATERCOURSES (BOTH TEMPORARY OR PERMANENT) OR THOSE AREAS SUBJECT TO EXISTING OR FUTURE FLOW.
12. SEDIMENT CONTROL DEVICES AND EROSION CONTROL BARRIERS MAY BE REMOVED ONLY AFTER THE SITE HAS BEEN STABILIZED AND THE CONSERVATION COMMISSION GRANTS PERMISSION.
13. ALL DISTURBED OR EXPOSED AREAS SUBJECT TO EROSION, WHICH REMAIN DISTURBED BUT INACTIVE FOR AT LEAST THIRTY DAYS, SHALL RECEIVE TEMPORARY SEEDING IN ACCORDANCE WITH THE MASSACHUSETTS EROSION AND SEDIMENT CONTROL GUIDELINES. IN ALL CASES, STABILIZATION MEASURES SHALL BE IMPLEMENTED AS SOON AS POSSIBLE IN ACCORDANCE WITH THE MASSACHUSETTS EROSION AND SEDIMENT CONTROL GUIDELINES.
14. EARTHWORK ACTIVITY ON THE SITE SHALL BE DONE IN A MANNER SUCH THAT RUNOFF IS DIRECTED TO TEMPORARY DRAINAGE SWALES, STILLING BASINS, SEDIMENT TRAPS AND/OR SEDIMENTATION BASINS TO SETTLE OUT SUSPENDED MATERIALS PRIOR TO DISCHARGE THROUGH PERIMETER EROSION CONTROL BARRIERS. THE SEDIMENT FOREBAYS MAY BE UTILIZED AS TEMPORARY SEDIMENTATION BASINS. THE BIORETENTION SYSTEMS SHALL NOT AT ANY POINT DURING CONSTRUCTION, BE UTILIZED AS TEMPORARY SEDIMENT BASINS.
15. THE LOCATION OF TEMPORARY DRAINAGE SWALES, SEDIMENTATION TRAPS AND SEDIMENT BASINS SHALL BE DETERMINED IN THE FIELD AND RELOCATED AS REQUIRED AS CONSTRUCTION PROGRESSES.
16. THE CONTRACTOR SHALL KEEP ON SITE AT ALL TIMES ADDITIONAL HAYBALES AND EXTRA SILTATION FENCING FOR INSTALLATION AT THE DIRECTION OF THE ENGINEER OR THE CONSERVATION COMMISSION TO MITIGATE ANY EMERGENCY CONDITION.
17. REFER TO THE BIORETENTION SYSTEM DETAILS FOR ADDITIONAL EROSION CONTROL MEASURES.
18. THE ENTRANCE AND EXIT TO AND FROM THE SITE SHALL BE MAINTAINED IN A CONDITION WHICH WILL PREVENT TRACKING OR FLOWING OF SEDIMENT ONTO PUBLIC RIGHT-OF-WAY. ALL SEDIMENT SPILLED, DROPPED, WASHED OR TRACKED ONTO PUBLIC RIGHT-OF-WAY MUST BE REMOVED IMMEDIATELY.
19. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE SITING, RELOCATION AND AUGMENTATION OF EROSION CONTROL DEVICES AS THE PROJECT PROGRESSES AND THE SITE DRAINAGE CONDITIONS CHANGE.
20. THE CONTRACTOR SHALL MODIFY EROSION CONTROL MEASURES BASED ON CHANGING SITE DRAINAGE CONDITIONS AND EXPECTED FUTURE CONSTRUCTION ACTIVITIES.
21. THE CONTRACTOR SHALL MINIMIZE THE AREA OF DISTURBED SOIL. EFFORTS SHALL BE MADE TO LIMIT THE TIME OF EXPOSURE OF DISTURBED AREAS.

STORMWATER OPERATION AND MAINTENANCE

SCHEDULE:

INFILTRATION BASIN:
INSPECT AFTER EVERY MAJOR STORM EVENT (1" OR GREATER) DURING CONSTRUCTION AND FOR THE FIRST FEW MONTHS AFTER CONSTRUCTION TO ENSURE PROPER STABILIZATION AND FUNCTION THEREAFTER, INSPECT AT LEAST ONCE PER YEAR DURING WET WEATHER TO ENSURE THE BASIN IS MEETING DESIGN CRITERIA, CHECK FOR EROSION, TREE GROWTH, CLOGGING AND TRASH. REMOVE ORGANIC MATTER, TRASH AND DEBRIS AS NECESSARY. RE-SEED ERODED OR BARREN SPOTS IMMEDIATELY AFTER INSPECTION. REMOVE SEDIMENT AS NECESSARY DURING CONSTRUCTION, WHILE DRY, AND AT LEAST EVERY 5 YEARS AFTER CONSTRUCTION.

AT LEAST 2 TIMES DURING THE GROWING SEASON, MOW UPPER-STAGE, SIDE SLOPES AND EMBANKMENT. THE GRASS SHOULD NOT BE CUT LOWER THAN 4". REMOVE TRASH, GRASS CLIPPINGS, ORGANIC MATTER AND DEBRIS.

FOREBAY:
INSPECT MONTHLY AT A MINIMUM, OR AFTER MAJOR STORM EVENTS (2"OR GREATER) DURING AND AFTER CONSTRUCTION FOR EROSION, EXCESSIVE ACCUMULATION OF SEDIMENT AND TRASH. REPAIR ERODED SPOTS IMMEDIATELY AFTER INSPECTION. ACCUMULATED SEDIMENT SHALL BE REMOVED AT LEAST FOUR TIMES A YEAR OR BEFORE IT EXCEEDS 0.5' IN DEPTH, WHICHEVER OCCURS FIRST. SEDIMENT SHALL BE DISPOSED OF IN A SUITABLE AREA AND PROTECTED FROM EROSION BY EITHER STRUCTURAL OR VEGETATIVE MEANS.

CATCH BASINS AND DEEP SUMP MANHOLES:
INSPECT MONTHLY (MINIMUM), OR AFTER MAJOR STORM EVENTS (1" OR GREATER) DURING AND AFTER CONSTRUCTION FOR EXCESSIVE ACCUMULATION OF SEDIMENTS AND TRASH. CLEAN SUMPS SEMIANNUALLY OR WHEN SEDIMENT REACHES 18", WHICHEVER OCCURS FIRST. ALL CATCH BASINS SHALL BE PROVIDED WITH HAYBALE DIKES OR PRE-MANUFACTURED "SILT-SAC" CATCH BASIN INLET SEDIMENT COLLECTION SYSTEMS UNTIL BASE COURSE IS IN PLACE. INSPECT WEEKLY AND AFTER MAJOR STORM EVENTS (1" OR GREATER) THROUGHOUT CONSTRUCTION.

STREET SWEEPING:
ALL PAVED AREAS SHOULD BE SWEPT TWICE A MONTH DURING CONSTRUCTION AND FOUR TIMES PER YEAR DURING THE EARLY AND LATE SPRING, SUMMER AND LATE FALL SEASONS AFTER CONSTRUCTION.

INFILTRATION/LEACHING GALLEYS:
INSPECT AFTER EVERY MAJOR STORM EVENT (1" OR GREATER) DURING CONSTRUCTION AND FOR THE FIRST FEW MONTHS AFTER CONSTRUCTION TO ENSURE PROPER STABILIZATION AND FUNCTION, THEREAFTER INSPECT AT LEAST TWICE PER YEAR DURING WET WEATHER TO ENSURE THE SYSTEM IS DRAINED PROPERLY, CHECK FOR ACCUMULATION OF SEDIMENT AND PONDING WATER. IF PONDING WATER IS VISIBLE INSIDE THE SYSTEM FOR SEVERAL DAYS AFTER A STORM EVENT, NOTIFY THE ENGINEER FOR POSSIBLE REMEDIAL MEASURES. REMOVE SEDIMENT AS NECESSARY DURING CONSTRUCTION, WHILE THE SYSTEM IS DRY, AND AT LEAST EVERY 5 YEARS AFTER CONSTRUCTION.

GENERAL O AND M NOTES:

1. THE OWNER/CONTRACTOR SHALL BE RESPONSIBLE FOR THE PROPER INSPECTION AND MAINTENANCE OF ALL STORMWATER FACILITIES UNTIL THE PROJECT CONSTRUCTION IS COMPLETED. SUBSEQUENT TO THAT, THE FACILITY MANAGEMENT COMPANY WILL BE RESPONSIBLE.
2. THE OWNER/CONTRACTOR/FACILITY MANAGER SHALL FILE AN INSPECTION REPORT TO THE PLANNING BOARD FOLLOWING EACH SITE INSPECTION AS RECOMMENDED ABOVE. THE INSPECTION REPORT SHALL IDENTIFY THE DATE OF INSPECTION, NAME AND CONTACT NUMBER OF RESPONSIBLE PARTY, SPECIFIC STRUCTURES INSPECTED, SPECIFIC MAINTENANCE AND/OR REPAIRS REQUIRED AND GENERAL OBSERVATIONS. ANY DEFICIENCIES NOTED IN THE INSPECTION REPORT SHALL BE CORRECTED TO THE SATISFACTION OF THE PLANNING BOARD.
3. DISPOSAL OF ACCUMULATED SEDIMENT AND HYDROCARBONS TO BE IN ACCORDANCE WITH APPLICABLE LOCAL, STATE AND FEDERAL GUIDELINES AND REGULATIONS.
4. THE CONTRACTOR SHALL BE RESPONSIBLE FOR CLEANING ALL COMPONENTS OF THE STORMWATER MANAGEMENT SYSTEM AND SWEEPING ALL PAVED AREAS.

TOTAL:	4,875 GAL	5,000 GAL

SEPTIC DESIGN NOTES:

1. ALL DIMENSIONS ARE PERPENDICULAR TO THE PROPERTY LINES.
2. ALL SYSTEM COMPONENTS SHALL BE INSTALLED IN COMPLIANCE WITH THE STATE SANITARY CODE TITLE V AND THE BOARD OF HEALTH REQUIREMENTS.
3. ANY CHANGE TO THE SEPTIC SYSTEMS SHOWN ON THIS PLAN MUST BE APPROVED BY THE BOARD OF HEALTH AND ATLANTIC DESIGN ENGINEERS.
4. BEFORE BACKFILLING THE SEPTIC SYSTEMS, THE CONTRACTOR SHALL NOTIFY THE DESIGN ENGINEER AND THE BOARD OF HEALTH FOR INSPECTION.
5. HEAVY EQUIPMENT SHALL NOT TRAVEL OVER DISPOSAL SYSTEM DURING OF AFTER CONSTRUCTION.
6. TIGHT JOINT (T.J.) PIPING SHALL CONSIST OF POLYVINYL CHLORIDE (PVC) SCHEDULE 40. ALL PIPES TO BE LAID ON FIRM BASE AND TO BE WATERTIGHT. ALL CONNECTIONS AND JOINTS SHALL BE MECHANICALLY SOUND AND TIGHT. SLOPES ON ALL SEWER AND DRAIN LINES ARE APPROXIMATE. CONTRACTOR TO HOLD INVERTS FOR CONSTRUCTION.
7. ALL SEPTIC SYSTEM COMPONENTS AND DRAINAGE STRUCTURES SHALL BE REQUIRED TO WITHSTAND HEAVY DUTY H-20 LOADINGS.
8. SEWER MANHOLE SHALL HAVE AN INLET TEE EXTENDING TO ONE INCH ABOVE THE OUTLET INVERT ELEVATION.
9. REFER TO ARCHITECTURAL PLANS BY BUILDING ARCHITECT FOR BUILDING PLANS AND ELEVATIONS AND EXACT UTILITY TIE-IN LOCATIONS.
10. ALL WATER PIPE AND APPURTENANCES SHALL BE INSTALLED IN ACCORDANCE WITH THE REQUIREMENTS OF THE MASHPEE WATER DEPARTMENT.
11. ALL EXISTING UTILITIES, WATER, AND DRAINAGE STRUCTURES SHOWN ARE APPROXIMATE ONLY AND THE CONTRACTOR SHALL BE RESPONSIBLE FOR VERIFICATION OF ALL LOCATIONS AND RIM AND INVERT ELEVATIONS. UTILITY INFORMATION SHOWN ON THIS PLAN IS APPROXIMATE ONLY, IS NOT WARRANTED BY THE OWNER AND ENGINEER TO BE CORRECT, NOR DOES THE OWNER AND ENGINEER WARRANT THAT ALL UNDERGROUND UTILITIES ARE SHOWN.
12. SITE CONTRACTOR TO VERIFY EXISTING SITE CONDITIONS AS SHOWN AND BRING ANY INCONSISTENCY TO THE ATTENTION OF THE OWNER PRIOR TO BIDDING.
13. IT IS THE CONTRACTOR'S RESPONSIBILITY TO NOTIFY DIGSAFE, THE TOWN OF MASHPEE HIGHWAY DEPT., AND ALL UTILITY COMPANIES A MINIMUM OF 72 HOURS PRIOR TO CONSTRUCTION ACTIVITIES FOR LOCATION OF ALL UNDERGROUND UTILITIES AND UTILITY COMPANY AND DPW APPROVALS.
14. ALL DISTURBED AREA SHALL BE PAVED, LANDSCAPED, OR REVEGETATED WITH 4"(MIN) LOAM AND SEED IMMEDIATELY UPON COMPLETION OF CONSTRUCTION.
15. SEWER, WATER, AND UTILITY BUILDING SERVICES SHOWN ARE APPROXIMATE. REFER TO ARCHITECTURAL PLANS FOR EXACT TIE-IN LOCATIONS. SITE CONTRACTOR IS RESPONSIBLE FOR UTILITY SERVICES TO WITHIN 5' OF THE BUILDINGS.

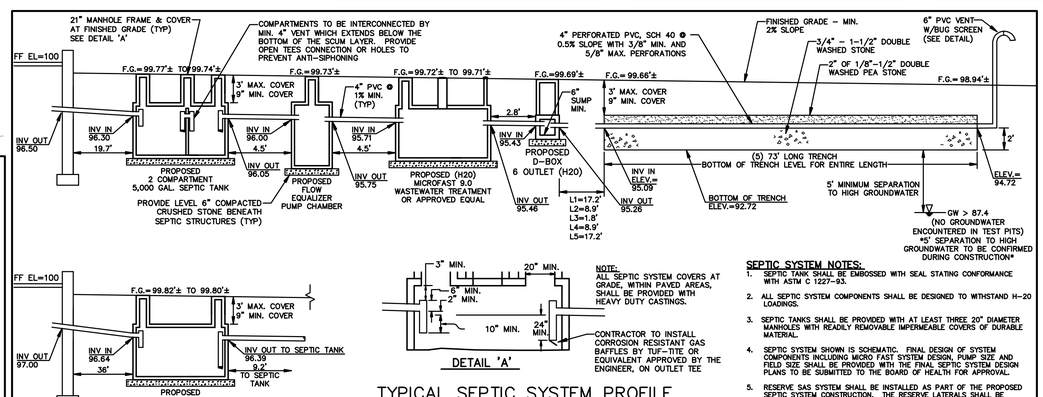
INSPECTION SCHEDULE:

A. EXCAVATION INSPECTION
EXCAVATION OF SOIL ABSORPTION SYSTEM IN ORDER TO CONFIRM 5'OF NATURALLY OCCURRING PERVIOUS MATERIAL AND 5' SEPARATION TO HIGH GROUNDWATER.
B. PREBED
PRIOR TO INSTALLATION OF THE SYSTEM.
C. FINAL INSPECTION
PRIOR TO BACKFILLING OF SYSTEM.
D. FINISH GRADE INSPECTION
FOLLOWING BACKFILLING OF SYSTEM.



NOTE:
ALL SEPTIC SYSTEM COVERS AT GRADE, WITHIN PAVED AREAS, SHALL BE PROVIDED WITH HEAVY DUTY CASTINGS.

CONTRACTOR TO INSTALL CORROSION RESISTANT GAS BAFFLES BY TUF-TITE OR EQUIVALENT APPROVED BY THE ENGINEER, ON OUTLET TEE

TYPICAL SEPTIC SYSTEM PROFILE
(NOT TO SCALE)

SEPTIC SYSTEM NOTES:

1. SEPTIC TANK SHALL BE EMBOSSED WITH SEAL STATING CONFORMANCE WITH ASTM C 1227-93.
2. ALL SEPTIC SYSTEM COMPONENTS SHALL BE DESIGNED TO WITHSTAND H-20 LOADINGS.
3. SEPTIC TANKS SHALL BE PROVIDED WITH AT LEAST THREE 20" DIAMETER MANHOLES WITH READILY REMOVABLE IMPERMEABLE COVERS OF DURABLE MATERIAL.
4. SEPTIC SYSTEM SHOWN IS SCHEMATIC. FINAL DESIGN OF SYSTEM COMPONENTS INCLUDING MICRO FAST SYSTEM DESIGN, PUMP SIZE AND FIELD SIZE SHALL BE PROVIDED WITH THE FINAL SEPTIC SYSTEM DESIGN PLANS TO BE SUBMITTED TO THE BOARD OF HEALTH FOR APPROVAL.
5. RESERVE SAS SYSTEM SHALL BE INSTALLED AS PART OF THE PROPOSED SEPTIC SYSTEM CONSTRUCTION. THE RESERVE LATERALS SHALL BE CONNECTED TO A RESERVE MANIFOLD THAT IS CAPPED WITHIN THE DISTRIBUTION BOX AS SHOWN ON THE PLANS AND DETAILS.

RE: Application for Special Permit
Modi, LLC – Cape Cod Coffee
10 Evergreen Circle
Mashpee, MA
ADE Project #3110.00

Dear Mr. Lehrer:

On behalf of the Applicant, Modi, LLC, enclosed, please find documents relative to a Special Permit Application for the Cape Cod Coffee Project located at 10 Evergreen Circle. The project proposes a 2-story building, paved parking with curbing/berm, landscaping, recreational amenities, septic system, water, utilities, and stormwater facilities on a 1.74-acre lot within the Evergreen Circle subdivision, a newly built commercial/industrial subdivision off of Rte. 130. The use of the building will be a coffee shop that will include the processing, distribution and packaging of coffee as well as a shared industrial use tenant.

The Application for Special Permit form, fees, and abutter list with envelopes have been submitted previously and we are providing hard copies of the following items to the Planning Board to complete the application package:

1. Five (5) full size and eight (8) 11 X 17 size copies of Site Development Plans dated 6/21/19, prepared by Atlantic Design Engineers, Inc. (Sheets 1-6)
2. Five (5) full size and eight (8) 11 X 17 size copies of Landscape Plan dated 6/21/19, prepared by M.L. Curadossi Landscape Design
3. Two (2) copies of the Stormwater Report dated 6/21/19 by Atlantic Design Engineers, Inc.
4. One (1) copy of the Deed for the property
5. Five (5) full size and eight (8) 11 X 17 size Lighting Plans dated 6/21/19 by RAB Lighting, Inc.
6. Five (5) full size and eight (8) 11 X 17 size Building Elevations and Sign Details dated 6/21/19 by ConServ, Inc.

We believe the above-listed information demonstrates the project's compliance with the Town's Zoning Bylaws, specifically Section 174-25.1 Standards for Development in C-3 Districts and Section 174-45.6 Light Industrial Overlay District.

The following addresses specifically how the project and application complies with Section IV "Form and Content of Applications" from the Town of Mashpee. Planning Board Special Permit Regulations:

SECTION IV FORM AND CONTENT OF APPLICATIONS

B. The application shall also include:

1. the required fees as specified in Section VII;
   The application fee has been paid by the applicant.

2. a copy of the latest recorded deed or deeds to all property included within the proposed site, along with a copy of any currently valid recorded subdivision plan or special permit applicable to the site;
   A copy of the current deed is attached.

3. a site plan showing existing conditions, including at least all existing property and street layout lines, showing distances, as well as bearings referred to the Massachusetts State Plane coordinates using the North American Datum of 1983 (NAD83), zoning district, the names and addresses of all abutters, the location of buildings on the site (meaning the entire tract on which the proposed use or development is located) and within 300 feet of the site, existing wells and septic systems, existing roadways, existing utilities, any existing roadway, access, utility or drainage easements, wetlands, specimen trees, any other existing trees over ten (10) inches in diameter at breast height, water-courses and significant slope or other natural features, at a scale of 1 inch = 40 feet;
   The above information is shown on the site plans submitted with this application.

4. a plan of the site and all land within 300 feet of the site, showing existing elevations and topography using the North American Vertical Datum of 1988 (NAVD88) at a maximum of two-foot contour interval, as well as any wetlands protected under 310 CMR 10.02 (1) (a-d) or under Chapter 172 of the Code of the Town of Mashpee as flagged by a qualified expert, mean high and lowest low water for any adjacent water bodies and flood zones (with base flood elevation data) based on the most recent Flood Insurance Rate Maps prepared by the Federal Emergency Management Agency, at a scale of 1 inch = 40 feet (may be included in the existing conditions site plan described above or as a separate sheet);
   The above is information is shown on the site plans submitted with this application.

5. a natural resource map or maps, on a copy or copies of the topographic plan, indicating all wetlands as defined by MGL C. 131,§40, or otherwise referenced in this section, active or abandoned cranberry bogs or agricultural areas, generalized vegetation types and location, tree line of any wooded areas, soil types based on the latest information available from the United States Department of Agriculture Soil Conservation Service or on more detailed information obtained by the applicant and depth to groundwater table based on exploration by the developer or on other reliable data acceptable to the Board of Health;

Topography is shown on the site plans. There are no wetlands on, or in the vicinity, of the site. Soil test results are provided on the site plan and in the stormwater report submitted with this application.

6. in order to evaluate the impact of the proposed development to Town services and the welfare of the community, an impact statement in two parts as follows (in addition to the Water Quality Report required by the Zoning By-law):

   Part 1 – shall describe the impact of the proposed development on:

   a) all applicable Town services including, but not limited to, schools, water systems, parks, fire and police protection;
   b) at a minimum, all roads and intersections in the immediate vicinity (within one quarter mile) of the proposed development (including an estimate of summer peak hour, summer average daily, annual average peak hour and annual average daily traffic counts as well as level of service for summer and annual average peak hour);
   c) the ecology of the site and any significant off-site impacts.

   Part 2 – shall describe what actions have been taken to mitigate the impacts described in Part 1
   The impacts and mitigation measures of the project were addressed during the approval of the Evergreen Circle Definitive Subdivision, which was reviewed and approved by the Planning Board and the Cape Cod Commission.

7. for cluster subdivisions, a definitive subdivision plan and roadway designs conforming with the Board's *Rules and Regulations Governing the Subdivision of Land* or, for other projects, a site plan, prepared by a registered civil engineer and registered land surveyor, showing the proposed project, including:

   a) property lines and street layout lines showing distances and bearings referred to the Massachusetts State Plane coordinates using the North American Datum of 1983 (NAD83),
   b) location of all permanent survey monuments properly identified as to whether existing or proposed and with their coordinates under the NAD83 Massachusetts Coordinate System,
   c) buildings, showing location, dimensions and distances to all lot lines, streets and street rights-of-way,
   d) roadways, sidewalks and bikeways,
   e) parking facilities,
   f) existing and proposed NAVD88 elevations and topography at a maximum of two-foot contour interval, with proposed one foot intervals required for parking areas, stormwater management systems and within 50 feet of any proposed buildings, along with sufficient spot grades to adequately show the direction of stormwater runoff,

including at transition points, top and bottom of vertical curves, entrances, high points, low points and gutter lines,

g) types of ground cover and any other precautions to stabilize slopes,
h) existing trees over ten (10) inches in diameter at breast height and whether they are proposed to be retained or removed,
i) water-courses,
j) drainage,
k) utilities,
l) landscaping,
m) trash collection facilities and
n) other proposed features

at a scale of 1 inch = 40 feet, with a 24" x 36" index sheet at 1 inch = 100 feet or at another appropriate scale if the entire site can not be shown on one sheet at the 1 inch = 100 feet scale;
Not applicable

8. when a project is proposed to be built in phases (phasing of development is recommended, and will be required for projects involving a developed area in excess of 25 acres), a phasing plan overlaid on the site plan, along with proposed start and completion dates of each phase, showing proposed phasing of buildings, of site infrastructure and of land clearing;
Not applicable

9. a locus plan showing the site in relation to all major roadways and other significant landmarks within one mile of the site;
The above is information is shown on the site plans submitted with this application.

10. detailed roadway, sidewalk, bikeway and parking area plans at a scale of 1 inch = 40 feet, with roadways shown on plan and profile sheets as described in the Board's *Rules and Regulations Governing the Subdivision of Land*, prepared by a registered civil engineer, in addition to typical roadway cross-sections;
Parking areas and details for construction are shown on the site plans submitted with this application.

11. detailed landscaping plans at a scale of 1 inch = 20 feet;
Landscape/planting plans are provided with this application.

12. plans and documents illustrating proposed utilities, including the proposed water supply system showing proposed fire hydrant locations, and any proposed sewer, electric, telephone, gas and cable television utilities, at a scale of 1 inch = 40 feet;
The water, septic and utility systems are shown on the site plans submitted with this application.

13. plans and documents illustrating the proposed system of wastewater collection, treatment and disposal, at an appropriate scale, along with documentation regarding the proposed treatment technology, data demonstrating removal rates for BOD, total nitrogen and phosphorous and a description of proposed ownership, management and funding of the system;
The septic system with advanced de-nitrification technology is shown on the site plans.

14. plans and documents illustrating the proposed system of stormwater collection, treatment and disposal, including manholes, catch basins, pipes, drainage ditches, roof drainage systems, headwalls, surface and subsurface discharge areas, retention ponds and any other system elements, along with a stormwater management plan consistent with the provisions of Subsection 174.82.A.(4) of the Mashpee Zoning By-law, with plan drawings at a scale of 1 inch = 40 feet;
The drainage system design is shown on the site plans and a stormwater report is included with this application.

15. proposed building elevation drawings (side, front and back) at a scale of ¼ inch = 1 foot, (for large or phased projects, "typical" elevations may be submitted at the discretion of the Board), showing any proposed wall signs, along with any design standards or codes to be applied to structures within the project;
Building elevations are provided with this application.

16. proposed signage designs at an appropriate scale, including location and dimensions of any freestanding signs;
Proposed signage design plans are provided with this application.

17. plans and documents illustrating the proposed system of site lighting, at an appropriate scale showing, at a minimum:

    a. the location and type of any outdoor lighting fixtures, on a 24" x 36" sheet, including lighting of buildings and structures, parking lots, recreation areas, landscaping and other outdoor lighting, including lighting of any signage, and showing the height of any freestanding outdoor light fixtures;

    b. the fixture manufacturer's specification data, including lumen output and photometric data showing cutoff angles;

    c. the type of lamp such as: metal halide, compact fluorescent, high pressure sodium with color temperature (Kelvin) and CRI indicated;

    d. a photometric plan, on a 24" x 36" sheet, showing the intensity of illumination at ground level, expressed in foot candles; and

    e. that light trespass onto any street or abutting lot will not occur. This may be demonstrated by manufacturer's data, cross section drawings, or other means.

A site lighting and illumination plan is included with this application.

18. accurate calculations of the area within the site of wetlands, of any open space to be preserved or transferred to the town or to a nonprofit organization and of areas proposed for roadways and other development, along with the applicant's calculation of allowed dwelling units for residential projects, or square footage of non-residential structures, based on the provisions of the applicable section of the Zoning By-Law;
Open space was addressed during the approval of the Evergreen Circle Definitive Subdivision, which was reviewed and approved by the Planning Board and the Cape Cod Commission.

19. a Water Quality Report prepared in conformance with the requirements of Section 174-27 of the Zoning By-law, including a plan showing the location of all water quality monitoring wells at a scale of 1 inch = 100 feet;
A Water Quality Report, along with Nitrate Loading Calculations, was completed for the Evergreen Circle Definitive Subdivision, which was reviewed and approved by the Planning Board and the Cape Cod Commission.

20. where the Zoning By-law requires the provision of open space, the developer's declaration of his choice of method or methods of dedicating the required open space of the three (3) methods described in the Zoning By-law, along with proposed covenants and restrictions to secure the permanent legal existence of the preserved open space and the proposed wording of any deed for transfer in fee to the Town or to a nonprofit organization and
Open space was addressed during the approval of the Evergreen Circle Definitive Subdivision, which was reviewed and approved by the Planning Board and the Cape Cod Commission.

21. any additional items required by Article IX of the Zoning By-law for special permits issued under the terms of applicable sections of that article.
Not applicable

EXHIBIT A

ATTACHED TO AND FORMING PART OF THE FORECLOSURE DEED AND AFFIDAVIT FOR THE PROPERTY LOCATED AT **28 BLUE CASTLE DRIVE, MASHPEE, MA.**

MORTGAGEE'S NOTICE OF SALE OF REAL ESTATE

By virtue and in execution of the Power of Sale contained in a certain Mortgage given by M & F Construction, Inc., dated September 9th, 2005 and recorded with the Barnstable County Registry of Deeds in Book 20261, Page 69 to Duco Associates, Inc., of which Mortgage the undersigned is the present holder, for breach of the conditions of said Mortgage and for the purpose of foreclosing same, the mortgaged premises will be sold at Public Auction at 11:00 AM on the 21st day of November, 2013 on the mortgaged premises hereinafter described namely:

28 Blue Castle Drive, Mashpee, Massachusetts, 02649

TO WIT:

A certain parcel of real property known as 28 Blue Castle Drive, Mashpee, Barnstable County, MA. 02649, more particularly described as follows:

The land in Mashpee, Barnstable County, Massachusetts, with the buildings thereon, bounded and described as follows:

Beginning at a point on the northwest corner of land now of William L. Hawley thence

SOUTHERLY by land of said William Hawley, two hundred (200) feet;

WESTERLY by land now or formerly of the Estate of Aaron Foster, three hundred (300) feet;

NORTHERLY by land of David H. Greene, two hundred (200) feet; and

EASTERLY by the southerly sideline of a forty (40) foot private way, three hundred (300) feet to the point of beginning, with all rights to pass and repass over said private road.

Containing 60,000 square feet, be the same more or less.

Being the same premises conveyed to M & F Construction, Inc. by foreclosure deed dated August 9th, 2005 and recorded with the Barnstable County Registry of Deeds in Book 20251, Page 64.

The Premises to be sold and conveyed subject to and with the benefit of all rights, rights of way, restrictions, easements, covenants, liens or claims in the nature of liens, improvements, public assessments, any and all unpaid taxes, tax titles, tax liens, water and sewer liens and any other municipal assessments or liens or existing encumbrances of record which are in force and are applicable, having priority over said mortgage, whether or not reference to such restrictions, easements, improvements, liens or encumbrances is made in the deed.

Terms of Sale: Ten Thousand Dollars ($10,000.00) will be required to be paid by bank or certified check at the time and place of sale. The successful bidder shall be required to sign a Memorandum of Sale containing the above terms at the Auction Sale. The balance is to be paid by bank or certified check at the Law Offices of Barr and Cole, 1172 Beacon Street, Suite 202, Newton, MA 02461 within 30 days from the date of sale. Deed will be provided to the purchaser for recording upon receipt in full of the purchase price. Time is of the essence.

The Mortgagee reserves the right to postpone the sale to a later time and/or date by public proclamation at the time and date appointed for the sale and to further postpone the sale at any adjourned sale date by public proclamation at the time and date appointed for the adjourned sale date.

Other terms and conditions to be announced at the time and place of sale and will be incorporated in the Memorandum of Sale signed at the sale.

In the event of an error in this publication, the description of the premises contained in said mortgage shall control.

Duco Associates, Inc.
Present Holder of said Mortgage,
By its Attorney,
Stuart N.Cole

RE: 11 Evergreen Circle, Mashpee, MA – Map 19 ~ Parcel 10-12

Dear Mr. Lehrer and Mashpee Planning Board:

On behalf of the Applicant, Kevin Andrade, a request of waivers is being sought after for the above referenced property.

The purpose of this request is to approve the proposed commercial building and site construction to provide retail use with redemption center and office space facility at 11 Evergreen Circle, Mashpee, MA. Under the Town of Mashpee Zoning Bylaws section §174-24 C. 1. Special Permit Use *"Any other uses denoted in §174-25 by the letters "SP," or by the letters "PR/SP" where construction of a building or addition containing more than one thousand (1,000') square feet of gross floor area is involved, shall be permitted as a special exception only if the Planning Board so determines and grants a Special Permit therefor…"* are allowed if the Planning Board issues a Special Permit for such use.

The new building and site construction will be located on 11 Evergreen Circle Road. This property is one parcel identified as Lot A of the Definitive Subdivision Plan, Evergreen Circle, Prepared for Evergreen Industrial Park, #588 Main Street (Route 130) in Mashpee, MA approved on 11-20-17 by Mashpee Planning Board and recorded at the Barnstable Registry of Deeds under Plan Book 674 Page 38. The Applicant will construct one building for a retail use (liquor store with redemption center) and office space use. The office use is allowed under section 174-25 C. (1) under the symbol PR/SP and the retail use is allowed under section 174-25 E. (12) under the symbol SP, both by special exemption if the Planning Board grants a Special Permit.

Based on a drawing by our firm, dated April 23, 2019, revised June 13, 2019 and entitled "Site Plan" waivers will be needed in order to proceed.

Under Town of Mashpee Planning Board Special Permit Regulations Section IV B, the following Waivers will be needed.

CAPE & ISLANDS ENGINEERING
CIVIL ENGINEERING - LAND SURVEYING - ENVIRONMENTAL PERMITTING
INCORPORATED
SUMMERFIELD PARK
800 FALMOUTH ROAD, SUITE 301C
MASHPEE, MA 02649
(508) 477-7272 FAX (508) 477-9072
email: info@CapeEng.com

The waivers required are as follows:

NO.	DESCRIPTION
4.	A plan of the site and all land within 300 feet of the site.
5.	Natural Resource Map indicating general vegetation type, soil types and groundwater levels. – Refer to Site Plan sheet C-121 for soil information
6.	Impact statement of Town Services and Welfare of the Community.
7.	Cluster Subdivision – Not Applicable
8.	Phased project – Not Applicable
10.	Detailed Roadway Plans – Not Applicable
13.	Detail wastewater treatment removal rate analysis – Not Applicable, typical on-site Title 5 septic system proposed. Site Plan includes septic system design criteria and construction details.
19.	Water Quality Report, Section 174-27
20.	Open Space requirements – Not Applicable

If you have any questions please feel free to call.

Sincerely,

Raúl Lizardi-Rivera, P.E.
Director of Engineering

TABLE OF CONTENTS

1.0 OVERVIEW

1.1 Introduction

Cape & Islands Engineering, Inc. submits this Stormwater Report, on behalf of the applicant, Kevin Andrade who propose to develop a commercial facility located at 11 Evergreen Circle, Mashpee, MA. The project includes construction of a 9,500 square feet building, bituminous pavement parking and driveways, with the associated clearing, grading, utilities and landscaping at the property. Among the proposed utilities for this development is the stormwater management system designed to intercept and dispose of storm runoff generated within the developed areas in accordance with local requirements.

This report describes the hydrologic and hydraulic analysis for the proposed stormwater treatment process and the operation and maintenance requirements associated with stormwater runoff for the proposed development. This report accompanies a set of drawings (Site Plan) that represent the proposed site development and stormwater treatment system, and a set of calculations (enclosed) that identify the stormwater runoff flows and capacity analysis of the receiving facilities.

The applicant proposes to develop the existing vacant parcel to construct a commercial building with paved driveways and parking lot amounting to approximately 39,200 square feet of impervious surfaces. Stormwater systems are proposed to manage surface runoff from four (4) contributing drainage areas and are designed as above grade drain basins with subsurface leaching systems. The surface drain basin areas vary in footprint and are approximately 15 to 22-inches in depth. These systems will collect surface runoff and will provide soil infiltration for the most frequent and less intense rainstorm events. Additional storm flow volume capacity is designed within a subsurface leaching system where runoff volume that exceeds the depth of the drain basin system infiltrates through the sand texture soil stratum. This drainage system has been designed to control up to the 100-year 24-hour design storm event (see enclosed HydroCAD analysis) which exceeds regulatory standards.

The proposed system provides peak runoff attenuation, total suspended solids (TSS) removal, pollutant removal, and groundwater recharge within the development as required by the Town of Mashpee Bylaws. The system is properly sized to accommodate the first flush of stormwater runoff calculated as one inch (1") of runoff volume over the impervious surfaces infiltrating into the ground in less than 72-hours following the storm event (refer to calculations below). The proposed stormwater systems shall be maintained and inspected in accordance to the Operation and Management Plan (O&M) provided in this report for the proper operation of the stormwater

1.2 Applicable Regulations

As an commercial development within the Town of Mashpee the applicable regulation is found under the Mashpee Zoning Code "*Article VI §174-27.2 Stormwater Management.*" The regulation established minimum designed and sizing requirements and recommendations. This same regulation allows for the use of the Massachusetts Department of Environmental Protection Stormwater Management Standards (MassDEP Standards) through the use of the Stormwater Management Handbook to serve as guidance for the design of the stormwater management system. The design and system size for this proposed development is based on the MassDEP Standards. The DEP Standards require storm runoff to meet certain qualities and quantities criteria prior to final discharge in proximity to wetland resource areas. However, the application for this development is not to be reviewed for impacts to wetland resource area given that none exist on the property or within 100-feet of the project. The MassDEP Standards are incorporated to this design by omitting any reference related to wetland resource areas or discharges to wetland resource areas. In combination with the requirements from the Mashpee regulations the following sections, and in particular section 4 describe compliance of the proposed stormwater treatment system with applicable regulations.

2.0 BACKGROUND

2.1 Existing Conditions

The property is a vacant and naturally vegetated parcel of land containing approximately 81,243 square feet in area. The property is located within the Mashpee Commercial C3 Zoning District along the north side of Evergreen Circle. Properties abutting the parcel are designated the same zoning district except for properties to the west which is designated Industrial I1 district. As is typical of undeveloped properties the subject parcel contains no form of stormwater management system and given its naturally vegetated state there is very little impact from surface storm runoff generated on the property. Surface runoff is not considered a nuisance to adjacent developments. Alterations to the existing conditions will inevitable alter this existing scenario and to mitigate the increase in surface runoff within the property the proposed development will provide adequate on-site stormwater management.

2.2 Property History

The vacant property is currently a wooded parcel that is one of the parcels from a recently approved commercial/industrial subdivision of land. No impervious surfaces exist that generate surface runoff. Storm runoff is naturally managed by existing topography (depressions and existing drainage systems) and vegetation and does not contribute to offsite runoff patterns.

2.3 Site Characteristics

As mentioned above the site is a naturally vegetated parcel with no wetland resource areas within one hundred feet (100'). Existing natural vegetation is dominated with pine and oak trees. Surface elevations range from approximately 112-feet to elevation 115-feet as shown and referenced on the construction drawings and based on the 1988 North American Vertical Datum (NAVD 1988). The topography of the land is fairly leveled with a couple of depressed areas.

Geologically the land has been mapped as being part of a glacial outwash. The Soil Survey of Barnstable County, Massachusetts issued by the United States Department of Agriculture in March 1993 classifies the soils as Merimac Sandy Loam. The mapping of the soil corresponds to the composition of upper soil horizons, which indicates a predominant textural class of sandy loam soils. Soil tests performed on the property and on adjacent properties confirm that the existing surface soils correspond to textural class of sandy loam upper soils and at a depth of approximately 32 inches the natural soils encountered are sand texture. Substratum sand texture soils found on-site typically have a hydraulic conductivity of over 30-inches per hour (in./hr.) and permeameter tests performed in the sand texture soils for the designed of the subdivision road (Evergreen Circle) measured infiltration rates of 31 and 56 inches per hour. The Groundwater Contour Maps published for Cape Cod approximate the water table at an elevation of 55-feet which is nearly 60-feet below grade. These findings are taken into consideration for the designed of the stormwater management system.

3.0 PROPOSED PROJECT

3.1 Scope of Work

The proposed development consists of building a 9,500 square feet commercial facility with a parking lot to meet the use demands. Approximately 39,200 square feet of impervious surfaces are proposed with the project. Storm runoff generated within the development will be captured and managed within the property in compliance with local requirements.

The stormwater systems is designed and sized to manage surface runoff. The surface runoff patterns will consist of four (4) contributing areas. Surface storm runoff is designed by grading and by edge of pavement gutters to discharge into four (4) drainage basin areas. These basins vary in footprint and are approximately 15 or 22-inches in depth. These systems will collect surface runoff and provide soil infiltration for the most frequent and less intense rainstorm events. The basin systems have been sized to manage the volume equivalent to one-inch (1") of surface runoff over impervious surfaces (refer to calculations). The volume capacity of the drain basins ensures that the majority of storm events, which are of lower rainfall intensity, are properly managed with a system that provides a vegetative filtration to storm runoff that frequently washes impurities from paved surfaces.

Additional storm flow volume capacity is designed within a subsurface leaching system. This added system provides the capacity needed for runoff volume that exceeds the depth of the drain basin. High intensity and less frequent storm events cause a condition where the size of the drain basin is not enough to manage the storm runoff volume. For those events the runoff volume is conveyed from the drain basin system through an inlet grate and into the subsurface system to be infiltrated through the sand texture soil stratum. There will be no outfalls to water bodies or wetland resource areas. This drainage system has been designed to control up to the 100-year 24-hour design storm event (see enclosed HydroCAD analysis) which exceeds regulatory standards.

The proposed system provides peak runoff attenuation, total suspended solids (TSS) removal, pollutant removal, and groundwater recharge within the development as required by the Town of Mashpee Bylaws. The system is properly sized to accommodate the first flush of stormwater runoff calculated as one inch (1") of runoff volume over the impervious surfaces infiltrating into the ground in less than 72-hours following the storm event (refer to calculations below). The proposed stormwater systems shall be maintained and inspected in accordance to the Operation and Management Plan (O&M) provided in this report for the proper operation of the stormwater system

3.2 Construction Methodology

Once a contractor for the project is retained a well-defined construction methodology will be established. In general, the construction phase for the site will follow typical industry methods. The work area will be accessed through the proposed driveway opening off Evergreen Circle where an entrance gravel protection pad is proposed. The site will be prepared for construction by clearing the necessary area of existing vegetation to be occupied by the proposed improvement. Limits of work will be established and protection to drainage inlets will be provided. Work will be done by different contractors, often, at different times. Efforts will be coordinated to minimize construction time and disturbance within and around the area.

During construction the contractor shall provide adequate erosion and sedimentation control to protect the construction site and adjacent properties. The majority of the cleared areas will be built on with the new building addition and pavement structures. Other areas will be stabilized with adequate landscape and planting and/or erosion control measures. Overtime the proposed landscape will mature providing proper screening and natural erosion protection for the development. The proposed drainage system will be installed at some point during the grading stages of the construction and properly protected from other construction activities on the site. The construction erosion and control measures should be properly maintained and inspected throughout the duration of the work to ensure adequate protection. Once the site reaches stability of the disturbed areas the temporary protection installed throughout the site and within the drainage systems shall be removed.

3.3. Proposed Drainage

Four (4) surface runoff patterns are being analyzed to be managed by the stormwater management system. Correspondingly, there are four (4) drainage systems to manage storm runoff generated from these areas. First, the entrance driveway and front right side of the development delivery (Drain Area 'A') will be graded to discharge a proposed drain basin. This area also includes

runoff from one quarter of the building roof area. Stormwater runoff enters the basin areas through paved waterways and a stone splash apron and by roof runoff drain pipes. A proposed subsurface leaching system will be installed to manage high intensity storm events. Similarly a second system is proposed to collect surface runoff from the front left side of the development (Drain Area 'B'). The rear left portion of the development (Drain Area 'C'), which includes the delivery and loading zone area, will be serviced by the third drainage system. The fourth drainage area (Drain Area 'D') is relatively the smallest and correspondingly includes the smallest drainage system. Roof runoff is proposed to be conveyed to drainage system through 6" HDPE roof drains contributing to all four drainage systems. The proposed paved swale and drainage basin side slopes will be protected with erosion control blankets and seeded with a erosion control seed mixture. Once established, the proposed vegetation provides natural filtration to storm runoff. Large runoff volume enter a series of grate inlets that convey the runoff volume to subsurface leaching system. The subsurface leaching system consists of pre-cast chambers surrounded with crushed stone installed within the existing sand texture subsoil for rapid infiltration and for groundwater recharge. The proposed stormwater management system follows best management practice (BMPs) and conforms to requirements adopted by the appropriate regulatory agency.

4.0 MASSDEP STANDARD COMPLIANCE

4.1 Standard #1: No untreated discharge or erosion to wetlands

The proposed project provides a drainage system as means of treatment to storm runoff generated from the development to maintain storm runoff within the property and infiltrate into the ground. There are no wetlands within the property nor within 100 feet of the property, therefore there will be no untreated discharge directed to wetlands.

4.2 Standard #2: Peak rate attenuation

Post-development storm peak runoff discharge is required to be kept at levels that do not exceed pre-development values at the point of discharge or down-gradient property boundary. Currently, the site is undeveloped and contains surface runoff within. The undeveloped stage of the property produces very little storm runoff except for extreme events of high intensity rainstorms. Storm runoff eventually filters into the ground due to the existing high permeable soils, existing depressions and drain systems. The area within the subject property that do not flow into existing depressions and produce surface runoff to offsite area will not be altered with the proposed development.

The proposed development as designed provides control and stormwater management up to the 100-year 24-hour design rainstorm. The proposed developed areas of the facility as designed will not produce overwhelming runoff volume to the drainage system in Evergreen Circle. The proposed stormwater management system reduces (attenuates) overall site runoff rates by containing the runoff volume up to the 100-year 24-hour design storm in conformance with this standard.

4.3 Standard #3: Stormwater recharge

Recharge to groundwater is required by the DEP Standards and by the Mashpee regulations to approximate existing conditions. Because the existing site retains and infiltrates storm precipitation, the proposed stormwater systems is designed to also intercept and infiltrate storm volume. The soil type on the site and the size of the stormwater system determines the capacity of volume infiltration. The Natural Resources Conservation Service (NRCS) assigns different Soil Class to differentiate the capacity of the topsoil to intercept stormwater. The site has been mapped as Hydrologic Soil Class A and well drain soil. The recharge will be attained through the drain basin areas and subsurface leaching system. Mashpee regulations require pre-treatment to one inch of runoff from the development surfaces prior to discharge to a leaching system. The one-inch target will have to be accumulated within the drainage basin prior to the leaching system. The one-inch target also exceeds

the Target depth factor (F) of 0.60 inches required by Mass DEP Standards and therefore the vegetated basin should be design for at least a volume equal to one-inch runoff. Volume in excess of one-inch will overflow into the leaching system. The drainage system will provide an adequate holding volume capacity to contain the quality volume and comply with the quality treatment to the storm runoff prior to infiltration.

4.4 Standard #4: Water Quality

The proposed drainage systems will provide treatment to the stormwater prior to final discharge. The Mashpee regulations require that one inch of runoff from the contributing area impervious surfaces be treated for quality before reaching the leaching component of the drainage system. The proposed drainage basins will provide the majority of the treatment. Prior to the drainage basin the system chain of components will allow for debris and suspended solids carried within the runoff to settle in the drain basin areas. Before storm volume enters the subsurface leaching system the sump within the catch basin will provide additional settlement of suspended solids. The one-inch requirement by the Mashpee regulations forces the design to be similar to a design for a site considered a LUHPPL by the DEP Standards. Calculations for runoff water quality conformance are provided in the section below.

4.5 Standard #5: Land uses with higher potential pollutant loads (LUHPPL)

The proposed stormwater treatment system is design to treat the equivalent of one-inch runoff volume. This parameter is the requirement for LUHPPL sites as specified within the DEP Standards. LUHPPL sites are specific to some type of uses and developments as defined under the regulations set forth on 310 CMR 10.04. As proposed this development conforms with this standard even if the facility is not a LUHPPL site and this standard found to not be applicable.

4.6 Standard #6: Critical areas

As stated previously, the site is not located near wetland resources and is not located within a DEP approved Zone II for public water supply. Therefore this Standard is not applicable.

4.7 Standard #7: Redevelopment

The proposed project is for an expansion over an area that is currently a vacant parcel it is considered new development therefore this Standard is not applicable.

4.8 Standard #8: Construction period controls

Proper control measures during the construction stages of this project are needed to prevent erosion and sedimentation problems. Open excavation and piled material and equipment shall be properly managed to avoid conditions that may result detrimental to the project. Refer to the Plan details for the proposed erosion and sedimentation measures during the construction period. The Erosion and Sedimentation Control Plan includes the following:

1. The contractor shall establish the limit of work (construction or silt fence) as indicated in the Construction Drawings and maintain the limit of work in good conditions throughout the duration of the work.
2. The Contractor shall install silt bags within nearby exiting catch basins in front of the work site to protect against siltation. The Contractor shall regularly and at least once a week remove the silt sac and properly dispose the accumulated sediments and replace the silt sac in the catch basin
3. The Installer shall examine the work area and site conditions under which this work is to be performed prior to installation of sedimentation and erosion control.
4. After every rainstorm the Contractor shall examine the conditions of all the erosion and sedimentation controls and perform any required repairs or replacements.

5. The Contractor shall maintain on site 200 linear feet of silt fence in the event erosion occurs. If erosion occurs during construction the Contractor shall take steps to control the erosion.
6. The Contractor shall remove all land clearing and construction activities debris (brush, stumps, wood, chips, etc.) from site and properly transport to an approved disposal site.
7. Stripped topsoil from areas to be graded shall be stockpiled at locations approved by the project engineer and shall be enclosed within a siltation fence or bales of straw.
8. Stabilization for construction of the parking and driveway shall be achieved by installing the gravel base immediately after the rough grading and sub-base compaction is complete.
9. The Contractor shall avoid smearing the bottom levels of the excavation and the exposed excavation face walls for subsurface leaching systems. The contractor shall scarified any areas where smearing occurs to provide adequate filtration through the soils.
10. The Contractor shall avoid using dirty or silty crushed stone for the construction of the leaching systems. The Contractor shall use double washed crushed stone for the construction of the subsurface leaching system. The stone shall be inspected and approved by the project engineer prior to installation.
11. All excavated areas rendering a slope greater than 3 horizontal to 1 vertical (3:1) shall be stabilized with the installation of erosion control matte.

4.9 Standard #9: Operation and Maintenance Plan

A properly operating drainage system is the basis for long life of the roads and parking areas and for the protection of wetland resources against pollutants carried by stormwater. If the drainage system fails to work, frequent pooling of stormwater would be expected to occur along the pavement surface leading to saturation of the gravel base and shortening the life expectancy of the pavement also, failing to protect the wetland resource areas. The owner or designated representative will be responsible for maintenance and operation of drainage system.

The owner or designated representative shall maintain a copy of the construction drawings as means of illustration of the location of the stormwater system, or other drawings depicting the site with all components of the drainage system location. Only authorized personnel by the owner shall maintain and operate the drainage system.

The drainage system has been design with consideration of the use as a commercial development. The owner or designated representative shall implement the following long-term pollution prevention measures:

1. The drainage system is intended for the interception of rainfall precipitation and snowmelt runoff. No other discharges shall be allowed within the systems unless reviewed by the appropriate trade professional for conformance with the design parameters of the system.
2. Proper road maintenance shall be performed without harming the drainage system.
3. Lawns, gardens and landscape care and maintenance clippings and refuse shall be properly disposed of. Dumping of yard waste should not be allowed within the drainage systems.
4. Snow and ice shall be properly managed. Snow or ice removal shall not obstruct the stormwater inlets and outlets. Snow piles shall not be placed within the stormwater vegetated basins.
5. A contractor who specializes on spill cleanings shall be engaged in the event of spills into the drainage system. The contractor shall properly clean the affected areas and the drainage system.

To provide for adequate maintenance of the drainage system, the following inspections and procedures will be required:

1. Inspect drainage basins after every major storm event (typically a storm of one inch of rainfall) and at least four times a year. Inspection will include measuring the depth of silt and sediment collected in the stone splash areas before the stone checks.
2. If a depth of sediments of over 4 inches is noticed the owner shall arrange for a contractor to properly remove the accumulated sediments.

3. The proposed crushed stone pads should be kept cleaned by routinely removing any debris that may be collected on the surface.
4. If water pooling remains within the drainage basin after 72 hours following a storm event remove and properly scarified the soil surface and aerate the soil to increase permeability. No need to remove established vegetation within the system.
5. If standing water is observed above the grate inlet rim 24 hours past a storm event inspect the system for the presence of clogging or obstruction. If clogging or an obstacle exists arrange for the system to be cleaned.
6. Inspect each drain basin at least once a year by observing the pooling duration after storm events. Remove any debris accumulation within the system. If pooling remains after 72 hours following a storm event scarified and aerate the soil surface to increase permeability. No need to remove established shrubs or trees within the system.
7. Provide watering as needed to all plantings on the site. Water immediately after planting and continue watering at least twice a week unless the rain does the job. As a general rule, planting needs one-inch of irrigation during the growing season. The planting within the vegetated basin should not require additional watering once the planting is established.
8. If standing water is observed above the outlet structure rim 24 hours past a storm event inspect the outlet piping for the presence of clogging or obstruction. If clogging or an obstacle exists within the pipe, arrange for the piping to be cleaned. If pooling persists and no apparent clogging is present refer to leaching system inspection.

At leaching systems locations, inspect the system by removing the cover and inspecting the interior. Measure the depth of standing water and compare to the actual depth of the structure. If the standing water is greater than half the depth of the structure, the leaching system shall be cleaned and inspected on a monthly basis. The leaching system is considered in failure when pooling occurs at the inlet grate at the leaching system and investigation has determined no apparent clogging or obstructions within the leaching system. To repair this situation, a contractor shall be hired to install the same size system in an adjacent area to the leaching system in failure, subject to subsurface soil investigations concerning permeability. The contractor shall connect the new system to the old failed system with the same size pipe and slope that currently exists.

4.10 Standard #10: Prohibition of Illicit Discharges

As noted within Standard 9 above several long-term pollution prevention measures are recommended to protect not only the stormwater management system but also the community and the environment. The drainage system has been design with consideration of the proposed use as a commercial development and the owner or designated representative shall implement the long-term pollution prevention measures to preserve a properly operating drainage system. A properly operated drainage system is the basis for long life of the roads and parking areas. The owner or designated representative will be responsible for maintenance and operation of drainage system.

5.0 STORMWATER DESIGN CALCULATIONS

5.1 Stormwater Quality and Quantity Volume

The stormwater treatment systems as described above will intercept stormwater runoff for the proposed development. Approximately 39,200 square feet of impervious surface is proposed to contribute surface storm runoff to the four (4) drainage systems (refer to attached Drainage Basin Plan). The proposed drain basin system for each contributing drainage area will manage the equivalent quality and quantity storm volume calculated as one-inch (1") over the proposed impervious areas even if the subsurface leaching systems were not accounted for. The table below identifies the contributing impervious surface and total drainage areas:

Area Description	Contributing Drain Area in square feet				
	Area A	Area B	Area C	Area D	Total
Impervious	10,400	11,900	10,400	6,500	39,200
Total	18,200	14,500	18,100	12,000	52,000

The water quality volume is calculated as one-inch (1") over impervious areas noted above. This volume is contained within the capacity of the proposed corresponding drain basin areas. As depicted below, the proposed drain basin areas are sized to properly contain the quality volume before any possible overtopping.

Drain basin volume obtained from HydroCAD storage calculations.

Parameter	Contributing Drain Area				
	Area A	Area B	Area C	Area D	Total
Impervious area, s.f.	10,400	11,900	10,400	6,500	39,200
Quality volume, c.f.	**867**	**992**	**867**	**542**	**3,267**
Drain basin depth, in.	21.8	17.3	20.9	15.6	N/A
Drain basin volume, c.f.	**872**	**1,011**	**872**	**546**	**3,301**

The drainage basin systems have enough surface area and provide a soil texture that allows for the quality volume contained within to infiltrate the soils in less than 72-hours (3 days) to prevent ponding of rain water for extended periods of time. The volume drawdown time is calculated by allowing the drain basin bottom area to infiltrate the water at an assigned infiltration rate. Based on the encountered soils the design assigns a saturated hydraulic conductivity (Ks) of 2.41 in./hr. from the recommendations published in Rawls table. The table below illustrates the time needed for the quality volume to completely dissipate from the surface of the drain basin areas confirming a drawdown time less than the maximum recommendation of 72-hours:

Drawdown time = (quality volume / Drain basin area) / (infiltration rate) x (units conversion factors)

Parameter	Contributing Drain Area			
	Area A	Area B	Area C	Area D
Drain basin area, s.f.	230	365	255	230
Quality volume, c.f.	867	992	867	542
Drawdown time, hours	**18.8**	**13.5**	**16.9**	**11.7**

5.2 Total Suspended Solid Analysis

As part of the quality treatment the drainage system shall remove total suspended solids (TSS) from the storm runoff water. The removal of TSS is provided by allowing the water volume some still time for suspended soils to drop out of the water. The methods used for the proposed design includes the grassed drain basins and the subsurface leaching systems. The drain basin area will be the main TSS removal component of this system. The subsurface leaching system assist in TSS removal for high intensity storm events.

TSS removal calculations (TSS Removal by BMP component/system) per MassDEP Stormwater Manual. All proposed drainage system will follow the same treatment train and therefore the same calculated TSS removal rates.

Starting TSS load at first BMP for any system set at 1.00

1. Drain Basin Area (BA) = 80% assigned removal rate
2. Infiltration System (IS) = 80% assigned removal rate

BMP	Removal rate	Starting TSS	Removed TSS	Remaining TSS
BA	80	1.00	0.80	0.20
IS	80	0.20	0.16	0.04
Total Suspended Solids (TSS) REMOVAL =				**96%**

5.3 Overall Stormwater Design for High Intensity Design Storms

During major storm events the runoff volume will exceed the capacity of the proposed drain basin areas and be conveyed into the subsurface leaching system. The subsurface leaching system is designed to manage an event equivalent to the 100-year design storm. The water level within the drain basin area and within the subsurface leaching system will vary depending on the intensity and duration of the storm event but the levels will be kept within the constraints of the drainage system. Below is a table comparing the water level within the drain basin and the subsurface system for the 100-year 24-hour design storms.

Parameter	Contributing Drain Area			
	Area A	Area B	Area C	Area D
Drain basin bottom elevation, ft.	111.0	112.0	111.0	112.0
100-year flood level elevation, ft.	113.20	113.90	112.96	113.84
Water depth, inches	**26.4**	**22.8**	**23.5**	**22.1**

6.0 SUMMARY

6.1 Conclusion

The intended commercial development for this site is typical and in keeping with the surrounding commercial and industrial neighborhood. The stormwater management system and erosion and sedimentation control plan proposed provides protection for the development once constructed and during the construction phases from stormwater impacts. Information as described in this report and within the construction documents submitted is comprehensive and informative enough for a qualified and experienced contractor to properly implement on the ground. Proper maintenance tasks and inspections procedures are recommended for the proposed erosion and sedimentation control measures for the contractor to implement and maintenance during the construction stages. Similarly, recommendations area provided for operation and maintenance of the stormwater management system for longevity and protection of the system as proposed. The design and sizing of the stormwater management system is adequate to manage stormwater runoff on the subject property and conforms with applicable requirements. The stormwater system as proposed is appropriate to manage runoff water for this development.

6.2 Contact Information

In an effort to reduce the amount of paper required for filings, the entire application can be emailed upon request to regulatory staff and commission members. Please contact Cape & Islands Engineering, Inc. by phone or email to obtain any paper or digital copies of project information.

Please contact Raul Lizardi-Rivera at 508.477.7272 or Raul@capeeng.com for copies of project information.

Article_

To see if the Town will appropriate and transfer the sum of $207 from revenue available for appropriation to pay previous fiscal year unpaid bills as follows:

John J. Maurer, Inc. $207

Submitted by the Department of Public Works

Article_

To see if the Town will vote to amend ARTICLE IV – Council on Aging, Section 3-15

"The Board of Selectmen shall appoint a Council on Aging to consist of seven (7) members"

Submitted by the Council on Aging

Article:

To see if the Town will vote to appropriate and transfer $85,100 from the Interest Outside 2 ½ account to the Principal Inside 2 ½ account and further appropriate and transfer $7,500 from the Interest Outside 2 ½ account to the Temporary Principal Outside 2 ½ account and further appropriate and transfer $42,500 Principal Outside 2 ½ to Temporary Principal Outside 2 ½ and further appropriate and transfer $500 from Interest outside 2 ½ to Interest Temporary Borrowing Outside 2 1/2 and further appropriate and transfer $950 from Interest outside 2 ½ to Principal Inside 2 ½ or take any other action relating thereto.

Submitted by the Town Treasurer

Explanation: This article is for the purpose of distributing the funds in the proper accounts due to the actual bonds and premium from the April 1st 2109 Bond issue. These funds could not be appropriated in annual Town meeting as the Bonding was completed after the warrant article submission. The $50,000 amount and $500 interest transferred will be used payoff a small BAN for the Quashnet school project.

Article_

To see if the Town will vote to add the following "Promulgation of Regulations" paragraph directly after the "WATERWAYS USE OF" heading and before Chapter 170-1 "Definitions" paragraph the following:

Chapter 170 – A. Promulgation of Regulations.

A. After public notice and public hearing, the Board of Selectmen shall promulgate rules and regulations to effectuate the purpose of this article. Notice shall be given at least two weeks prior to the public hearing by publication in a newspaper of general circulation in the Town and by posting with the Town Clerk and posting in the Harbormasters office.

B. These regulations shall define key terms and establish procedures for all waterways related uses including registration of moorings, assignment of mooring space, establishment and maintenance of a waiting list, inspection of moorings, specifications for moorings, identification of moorings and assignment and collection of fees.

C. Failure by the Board of Selectmen to promulgate such rules and regulations or a legal declaration of their invalidity by a court of law shall not act to suspend or invalidate the effects of this article.

D. After public notice and public hearing, the Board of Selectmen may amend or otherwise modify these rules and regulations. Notice shall be given at least two weeks prior to the public hearing by publication in a newspaper of general circulation in the Town and by posting with the Town Clerk and posting at the Harbormasters office.

Explanation: This article will greatly reduce the amount of time it presently takes to make any changes to our Waterways Bylaws and keeps the changes out in front of the interested public.

Article_

To see if the Town will vote to add to the Mashpee General Bylaw Chapter 170 §6-B.6 as follows:

The use of jet ski watercraft, surf jet watercraft, wet bike watercraft and other so-called personal watercraft which are motorboats is prohibited on Ashumet Pond.

Explanation: This Article will add a paragraph to the Town of Mashpee bylaw Chapter 170 §6-B. The Town of Falmouth has a bylaw with the same wording and the Commonwealth of Massachusetts will not enforce the Falmouth bylaw unless Mashpee also has a similar bylaw. Ashumet Pond is bordered by both Mashpee and Falmouth.

Article_

To see if the Town will vote to appropriate and transfer the sum of $37,950.00 from the Waterways Improvement Fund to the Popponesset Approach Channel account to cover the cost of dredging 5,000CY of sand and associated expenses from the Popponesset Approach Channel, or take any other action thereto.

Explanation: This Article will transfer funds from the Waterways Improvement Fund to cover the costs of dredging 5,000CY of sand from the Popponesset Approach Channel to help provide safe navigation.

Article_

To see if the Town will vote create a Waterways matching grant fund account and appropriate and transfer from the Waterways Improvement Fund the sum of $40,000.00 to the Waterways matching grant fund account for the purpose of applying for grant monies that become available to the Town for the purpose of engineering and/or dredging of Mashpee waterways including associated expenses, or take any other action relating thereto.

Note: These funds available for 3 years and the line item has to be renewed very 3 years if not expended. Note that engineering services would fall under the "related expenses" heading.

Explanation: This Article will create and fund an account that would be available to apply for grant monies that require the Town to have matching funds in order to be eligible.

Article_

To see if the Town will vote to create an Engineering/Permitting/Dredging and Associated Expenses Account and appropriate and transfer the sum of $.08 from the Waterways Maintenance/Dredging account and appropriate and transfer the sum of $98,846.66 from the Mashpee River Dredging account for a total of $98,846.74 to the Engineering/Permitting/Dredging and Associated Expenses account.

Explanation: This Article will create and fund an account that will make the process easier to manage for the engineering, permitting, dredging and associated expenses for the Town's waterways.

Article_

To see if the Town will vote to appropriate and transfer the sum of $34,500.00 from the Channel Permit Account to the Engineering/Permitting/Dredging and Associated Expenses Account.

Explanation: This Article will transfer monies in to the Waterways account created in the previous article.

Article_

To see if the Town will vote to add the following words to the Mashpee Town Code Chapter 170, Section 170-2, A: except as otherwise noted, and vote to replace Chapter 170, Section 9, Moorings with the following:

A. After public notice and public hearing, the Board of Selectmen with input from the Harbormaster shall promulgate mooring rules and regulations. Notice shall be given at least two weeks prior to the public hearing by publication in a newspaper of general circulation in the Town and by posting with the Town Clerk and posting in the Harbormasters office.

B. These regulations shall define key terms and establish procedures for all waterways related uses including registration of moorings, assignment of mooring space, establishment and maintenance of a waiting list, inspection of moorings, specifications for moorings, identification of moorings and assignment and collection of fees.

C. Failure by the Board of Selectmen to promulgate such rules and regulations or a legal declaration of their invalidity by a court of law shall not act to suspend or invalidate the effects of this article.

D. After public notice and public hearing, the Board of Selectmen may amend or otherwise modify these rules and regulations. Notice shall be given at least two weeks prior to the public hearing by publication in a newspaper of general circulation in the Town and by posting with the Town Clerk and posting at the Harbormasters office.

Explanation: This article will allow the Board of Selectmen make Mooring Regulations without changing the Mashpee Town Code.

Article_

To see if the Town will vote to add to the Mashpee General Bylaw Chapter 170 §6-B.6 as follows: The use of jet ski watercraft, surf jet watercraft, wet bike watercraft and other so-called personal watercraft which are motorboats is prohibited on Ashumet Pond.

Explanation: This Article will add a paragraph to the Town of Mashpee bylaw Chapter 170 §6-B. The Town of Falmouth has a bylaw with the same wording and the Commonwealth of Massachusetts will not enforce the Falmouth bylaw unless Mashpee also has a similar bylaw. The Falmouth and Mashpee town line goes through Ashumet Pond with most of the pond in Mashpee.

ARTICLE

To see if the Town will vote to create an additional position of part-time (19 hours/week) Assistant Health Agent within the Health Department, with said position to be classified under Unit A of the Managers Laborers' International Union of North America, to be effective July 1, 2020, and to appropriate and transfer the sum of $XXX from revenue available for appropriation, with said funds to be distributed as follows: $XXX to the Health Department Salary/Wage account, $XXX to the Medical Insurance account, $XX to the Group Life Insurance account, $XXX to the Medicare expense account, and $XXX to the Barnstable County Retirement expense account, or take any other action relating thereto.

Submitted by the [illegible] Health Agent

Explanation: The part-time assistant health agent position is requested to help the existing Board of Health staff enforce the Board of Health's Short-Term Rental Regulation. The regulation requires inspection and registration of each of the short-term rental properties. The State's short-term rental program began in July, 2019 with a registration requirement and excise tax payment requirement but no enforcement. Over 600 short-term rental properties are reported in Mashpee. The new position will support the existing staff to implement, inspect and register the new properties within the short-term rental program.

ARTICLE

To see if the Town will vote to raise and appropriate or transfer from revenue available for appropriation a sum of money, to be expended under the direction of the Board of Health, for the purpose of entering into a contract with a consulting agency to identify short-term rental properties and to issue notifications on the requirements of the Board of Health Short-Term Rental Regulation.

Submitted by the [illegible] Health Agent

Explanation: These funds are being requested to aid the Board of Health in identifying and notifying short-term rental properties that are required to participate in the State's short-term rental program that went into effect in 2019, and to ensure enforcement of the Board of Health Short-Term Rental Regulation. The increase in compliance/participation will increase monies paid into the State's lodging excise tax program, which also contributes to the Cape Cod and Islands Water Protection Management Fund that funds water pollution abatement projects (sewers). The Board of Health has attained three (3) quotes from short-term rental compliance agencies, which are currently under consideration.

Article ____:

2019 JUL -8 AM 8:01

To see if the Town will vote to amend §174-45.4 of the Mashpee Zoning Bylaw as follows:

§174-45.4 Accessory Apartment:

A ~~Special Permit~~ **Building Permit** authorizing one (1) accessory apartment per lot may be granted ~~by the Board of Appeals~~ if consistent with the following:

A. In order for an accessory apartment to be permitted, in addition to meeting all of the requirements under subsections B-I, the principal dwelling unit shall not be occupied by anyone other than the property owner as listed on the latest recorded deed. On an annual basis coinciding with the initial date of issuance of the **Building Permit** ~~Special Permit~~, the property owner shall submit to the Building Inspector sufficient evidence to demonstrate occupancy of the principal dwelling unit.

B. The Applicant must provide documentation, endorsed by the Board of Health or its agent,that the proposed accessory apartment conforms **to** ~~with~~ all state and town health and sewage disposal regulations.

C. **Unit Size.** The design, installation, **and** use of an accessory apartment shall be secondary and incidental to the principal use of the structure as the owner's home**.** An accessory apartment **may** be located within the same structure as said home **or constructed within a new or pre-existing detached structure.** The gross floor area of the accessory apartment shall be not less than three hundred (300') square feet nor more than forty percent (40%) of the gross floor area of said structure on the date the **Building Permit** ~~Special Permit~~ application is filed.

D. **Interior Design**. The accessory apartment shall be self-contained, with separate sleeping, cooking and sanitary facilities for the exclusive use of the occupant(s). Provided that the requirements of subsection B are met, there shall be a maximum of two (2) bedrooms in an accessory apartment. Rooms which might be converted at some future time to a bedroom, such as studies, studios, libraries and the like, shall be counted as bedrooms for the purposes of this Section.

E. **Exterior Design.** Modifications to the exterior of an existing principal structure resulting from the installation of an accessory apartment **located within the same structure as the applicant's home** shall be consistent with the principal structure's predominant character as a single-family home.

Detached accessory apartments shall be consistent with the principal structure's dominant design character, will contribute to the subject property's lot coverage maximum and shall comply with the dimensional criteria established in § 174-31.

Appropriate landscaping may be required in order to provide a buffer between the applicant's lot and abutting properties.

F. **Parking.** Notwithstanding the provision of § 174-39, at least one (1) off-street parking space shall be provided for the accessory apartment in addition to any other off-street parking requirement.

G. No new driveway or curb cut shall be created to service the accessory apartment, unless the **Building Commissioner** ~~Board~~ determines that, due to severe topographic or other constraints on the lot, the required parking cannot be provided without relief from this provision and unless any necessary town or state curb cut permit is approved.

~~H. Any application for a Special Permit under this Section shall require the submission of three (3) original copies of the application, plans and documentation required under §174-24C.3 for Special Permit application to the Board of Appeals.~~

~~I. The Special Permit granted under this section shall run with the property owner and shall lapse upon sale and/or transfer to another property owner.~~

H. The accessory apartment shall not be rented or occupied until a Certificate of Occupancy has been issued by the Building Inspector.

~~I. A single accessory apartment per existing principal structure is exempt from the Plan Review requirement of §174-24.B.~~

I. An accessory apartment shall not be used for boarding and lodging, or other commercial use. An accessory apartment and principal dwelling to which it is accessory may be rented for periods not shorter than one month at a time, and are prohibited from any use as rental units on a weekly or daily basis.

J. An accessory apartment is not intended for sale. The principal dwelling and accessory apartment and lot on which they are located shall remain in common or single ownership, and shall not be severed in ownership, including that the lot or buildings thereon shall not be placed in a condominium form of ownership.

Submitted by Planning Board

EXPLANATION:

This article would allow for the development of accessory apartments as a by right use. It would also allow for the development of accessory apartments in newly constructed or pre-existing detached structures. Accessory apartments would also be allowed to be constructed within the principal structures existing envelope. It also defines standards limiting short term rentals.

Article____:

To see if the Town will vote to amend §174-25 (A)(8) of the Mashpee Zoning By Law "Table of Use Regulations" by replacing the letters 'SP' located in the columns identified as R-3 and R-5 with a 'Y' as follows:

Type of Use	Residential		Commercial			Industrial
	R-3	R-5	C-1	C-2	C-3	I-1
Accessory apartment subject to the provisions of §174-45.4	**~~SP~~** **Y**	**~~SP~~** **Y**	--	--	--	--

Submitted by Planning Board

EXPLANATION:

This article would allow the development of accessory apartments in the residential zoning districts of the Town as a by-right use.

Article _____:

To see if the Town will vote to amend §174-3 of the Mashpee Zoning Bylaw- Terms Defined as follows:

Accessory Apartment - An apartment created within **or detached from** a single-family residential structure under the provisions of §174-45.4.

Dwelling Accessory - A residence created under the provisions of Section 174- 46B(1), containing no more than ~~one (1)~~ **two (2)** bedrooms, which may have kitchen and bathroom facilities and other rooms which are not bedrooms, either attached to or detached from a principle residence on the same lot and not owned separately from the lot or principle residence. ~~**Such dwellings may not be occupied by more than two (2) persons.**~~

Submitted by Planning Board

EXPLANATION

This article would change the definition of Accessory apartment in the zoning bylaw to include detached structures. It would also change the definition of Dwelling Accessory in the Open Space Incentive Development (OSID) to allow Accessory Dwellings permitted under OSID to have up to two (2) bedrooms. This would establish consistency with the accessory apartment definition.

OCT 2019 T.M.

Proposed Article – General Bylaw. Polystyrene Reduction Bylaw. To see if the Town will vote to amend the Mashpee General Bylaws as follows:

#. Polystyrene Reduction Bylaw
#-1. Purpose and Intent
The use and disposal of polystyrene has significant impacts on our Town and our environment, including but not limited to:

1. Harm to marine and terrestrial animals through ingestion and entanglement.
2. Unsightly pollution and degradation of the terrestrial and aquatic environment, requiring costly cleanup efforts.
3. Disposal costs of difficult to recycle plastics for solid waste collection and recycling facilities.

With the goal of protecting the health of its citizens and the unique natural beauty and irreplaceable natural resources of the Town of Mashpee, and given that inexpensive, safe alternatives to polystyrene are easily obtained, the Town will phase out the use of certain polystyrene plastics by June 1, 2019.

#-2. Definitions

"Polystyrene Disposable Food Services Containers and Cutlery" shall mean single-use disposable products for serving or transporting food or beverages, including without limitation take-out foods and/or leftovers from partially consumed meals prepared by a restaurant and/or retail food establishment. This includes but is not limited to plates, cups, bowls, trays, hinged or lidded containers, straws, cup lids, and cutlery. It shall also include single-use disposable packaging for uncooked foods prepared on the premises, as well as disposable catering trays.

"Expanded or Foam Polystyrene" and "Polystyrene" shall mean blown polystyrene (polystyrene that has been expanded or blown using a gaseous blowing agent into a solid foam) and expanded and extruded forms, which are thermoplastic petrochemical materials utilizing a styrene monomer and processed by any number of techniques including but not limited to fusion of polymer spheres (expandable bead polystyrene), injection molding, form molding, and extrusion blown molding (extruded foam polystyrene), sometimes called Styrofoam, a Dow Chemical Co. trademarked form of polystyrene foam. It bears the recycling number 6.

"Food Establishments" shall mean any operations, including without limitation schools, farmers markets and other public venues that store, prepare, package, serve, vend or otherwise provide food for human consumption. Any establishment requiring a permit to operate in accordance with the State Food Code, 105 CMR 590.000, et. seq., shall be considered Food Establishments for the purpose of this bylaw.

"Retail Establishments" shall mean any commercial business facility that sells goods directly to consumers including but not limited to grocery stores, pharmacies, liquor stores, convenience stores, retail stores and vendors selling clothing, food, and personal items, dry cleaning services, theaters and all other food services establishments.

"Public Venues" shall mean operations including but not limited to schools, meeting halls, churches, Town offices, the Senior Center, Recreation Department facilities, and the Library.

#-3. Use Regulations

Polystyrene disposable food service containers, cutlery, and new polystyrene packing peanuts shall not be used or sold by food establishments and/or retail establishments within the Town of Mashpee on or after June 1, 2019. Any stock remaining after that date shall be accepted for disposal free of charge, through June 30, 2019, at the Mashpee Transfer Station/Recycling Center.

This bylaw shall not apply to:

1. Polystyrene packing peanuts and foam packaging reused from shipments coming to Mashpee.
2. Prepackaged meat and produce trays, egg cartons, and other food or beverage products bought from a wholesaler or an out-of-own supplier.
3. Polystyrene foam freezer chests.

#-4. Enforcement

Any enforcing person shall have the right to enter any establishment during regular business hours, without a search or inspection warrant, to make reasonable inspection to ascertain whether there is compliance with the provisions of this chapter. This article may be enforced by any Town police officer or agents of the Board of Health. This article may be enforced through any lawful means in law or in equity, including, but not limited to, noncriminal disposition pursuant to MGL c. 40, §21D and [add appropriate chapter of the Town's General By-laws]. Any establishment which violates any provision of this bylaw shall be subject to the following penalties:

First Offense:	$100 fine
Second Offense:	$200 fine
Third and Subsequent Offenses:	$300 fine for each offense

Offenses occurring within two years of the date of first reported offense will be considered as subsequent offenses. Each day or portion thereof shall constitute a separate offense, to do or act thereon.

The Board of Health, after a hearing conducted in accordance with the procedures set forth in 105 CMR 590.14 and 590.15, may suspend or revoke the food service permit for any establishment failing to comply with this bylaw.

#-5. Severability

If any provision of this ordinance shall be held to be invalid by a court of competent jurisdiction, then such provision shall be considered separately and apart from the remaining provisions of this ordinance, which shall remain in full force and effect

Proposed Article – General Bylaw Amendment. Single Use Plastic Straw Ban Bylaw. To see if the Town will vote to amend the Mashpee General Bylaws as follows:

#. Single Use Plastic Straw Ban
#-1. Intentions and Findings.
It has been found that:

1. Plastic straws are expensive and difficult to collect or recycle.
2. Mashpee's proximity to the ocean means that plastic straws that go uncollected by DPW have a high chance of ending up on the beaches or in the bays or ponds.
3. Plastic straws take hundreds of years to degrade, during which time they remain hazardous to wildlife and harmful to the environment.
4. There is currently a national movement to reduce and ban the use of plastic straws, making reasonable affordable alternatives increasingly available.

Because Mashpee has a duty to protect the natural environment, the economy, and the health of its citizens, this amendment proposes to ban the sale or dispensing of single use plastic straws, including those made from polyethylene, polypropylene, and polystyrene, by any food establishment, retail establishment, or public venue in the Town of Mashpee.

#-2. Definitions
"Plastic straw" shall mean any single use plastic straw including but not limited to those made from polyethylene, polypropylene, and polystyrene.

"Food Establishments" shall mean any operations including without limitation schools, farmers markets and other public venues that store, prepare, package, serve, vend or otherwise provide food for human consumption. Any establishment requiring a permit to operate in accordance with the State Food Code, 105 CMR 590.000, et. seq., shall be considered Food Establishments for the purposes of this bylaw.

"Retail Establishments" shall mean any commercial business facility that sells goods directly to consumers including but not limited to grocery stores, pharmacies, liquor stores, convenience stores, retail stores and vendors selling clothing, food, and personal items, dry cleaning services, theaters and all other food services establishments.

"Public Venues" shall mean operations including but not limited to meeting halls, schools, churches, Town offices, the Senior Center, the Recreation Department, and the Library.

#-3. Use Regulations

Plastic straws shall not be used, dispensed, or sold by food establishments and/or retail establishments within the Town of Mashpee on or after June 1, 2019. Any stock remaining after that date shall be accepted for disposal free of charge, through June 30, 2019, at the Mashpee Transfer Station/Recycling Center.

109-4. Administration and Enforcement
Any enforcing person shall have the right to enter any establishment during regular business hours, without a search or inspection warrant, to make reasonable inspection to ascertain whether there is compliance with the provisions of this chapter. This article may be enforced by any Town police officer or agents of the Board of Health. This article may be enforced through any lawful means in law or in equity, including, but not limited to, noncriminal disposition pursuant to MGL c. 40, §21D and [add appropriate chapter of the Town's General By-laws]. Any Establishment which violates any provision of this Bylaw shall be subject to the following penalties:

First Offense:	$100 fine
Second Offense:	$200 fine
Third and Subsequent Offenses:	$300 fine for each offense

Offenses occurring within two years of the date of first reported offense will be considered as subsequent offenses. Each day or portion thereof shall constitute a separate offense, to do or act thereon.

The Board of Health, after a hearing conducted in accordance with the procedures set forth in 105 CMR 590.14 and 590.15, may suspend or revoke the food service permit for any establishment failing to comply with this Bylaw.

109-5. Severability

If any provision of this ordinance shall be held to be invalid by a court of competent jurisdiction, then such provision shall be considered separately and apart from the remaining provisions of this ordinance, which shall remain in full force and effect.

For October 2019 Annual Town Meeting

2019 JUN 21 PM 2:23

Article __

To see if the Town will vote to appropriate or transfer from available funds $840,000 to the Sewer Commission Wastewater Treatment Plant Design Account, to complete the design of Phase 1 of the municipal wastewater treatment plant to be located adjacent to the Town's solid waste transfer station, or take any other action relating thereto.

Submitted by the Sewer Commission

Explanation: This article would provide funding to complete final design of phase 1 of the wastewater treatment plant to be located adjacent to the Town's solid waste transfer station. Work on preliminary designs for the plant is currently under way, expected to be completed by the end of 2019, using nitrogen mitigation funds held by the Cape Cod Commission as the result of conditions imposed on a number of Development of Regional Impact projects. This proposed funding would allow continuation of design work, to full design of Phase 1, upon completion of the preliminary design. This project is one of the initial steps in implementing the Town's Watershed Nitrogen Management Plan/CWMP.

For October 2019 Annual Town Meeting

2019 JUN 21 PM 2:23

Article __

To see if the Town will vote to appropriate or transfer from available funds $1,640,000 to the Sewer Commission Collection System Design Account, to complete the design of the first phase of the sewer collection system to be connected to the municipal wastewater treatment plant to be located adjacent to the Town's solid waste transfer station, or take any other action relating thereto.

Submitted by the Sewer Commission

Explanation: This article would provide funding for complete design of phase 1 of the sewer collection system to be connected to the wastewater treatment plant adjacent to the Town's solid waste transfer station. Work on collection system design would begin in late summer 2019 and be completed in December 2020, with construction anticipated in 2021 through 2023, pending funding and permitting for said construction. This project is one of the initial steps in implementing the Town's Watershed Nitrogen Management Plan/CWMP.

Article_____

To see of the Town will vote to amend **<u>Chapter 172-4(B)(3)</u>** of the General Bylaw as follows:

Amend the language of Subsection (B)(3) as follows:

Replace the phrase *"as prescribed in 310 CMR 280.21 through 280.25"* **with** *"as prescribed in 310 CMR 10.05(4)"*

<u>Explanation:</u> The existing wording makes reference to 310 CMR 280.21 through 280.25. This is an incorrect regulatory citation. The correct regulatory citation in the Massachusetts State Wetlands Protection Act is 310 CMR 10.05(4)

Submitted by the Conservation Department

Article_____

<u>To see if the Town will vote to amend Chapter 172-7 of the General Bylaws as follows:</u>

Amend the language of Chapter 172-7(A) as follows:

Replace the phrase *"significant or cumulative effect"* with *"adverse impacts"* or take any other action relating thereto.

Explanation:

The term *"adverse impact"* is used to describe a threshold of alteration within wetlands jurisdiction that is considered beyond negligible. It is referenced throughout the Massachusetts State Wetlands Protection Act. In order to establish consistency of proper terminology between the Chapter 172 Wetland Bylaw and the MA State Wetlands Protection Acts, this change of wording is necessary.

<u>To see if the will vote to amend Chapter 172-7(A)(3)(a) as follows:</u>

Replace the phrase *"preexisting conditions"* to *"existing conditions"* in the following sentence under this subsection *"Such waivers are intended to be granted only in rare and unusual cases and only when resource protection would be enhanced relative to* ***preexisting*** *conditions"*

Explanation:

The term *"existing conditions"* is a more appropriate term under the context of this bylaw subsection.

<u>To see if the Town will vote to amend Chapter 172-7(B) as follows:</u>

Replace the phrase *"unacceptable, significant or cumulative effects"* with *"adverse impacts"*

Explanation:

The term *"adverse impact"* is used to describe a threshold of alteration within wetlands jurisdiction that is considered beyond negligible. It is referenced throughout the Massachusetts State Wetlands Protection Act. In order to establish consistency of proper terminology between the Chapter 172 Wetland Bylaw and the MA State Wetlands Protection Acts, this change of wording is necessary.

Article_____

To see if the Town will vote to amend Chapter 172-9 of the General Bylaws as follows:

Amend the language of 172-9(A) to include the term "Adverse Impact" and it's definition as follows:

*"**Adverse Impact**- Adverse impact means an impact to the value or interest of a wetland resource area as defined by the bylaw that is deemed by the issuing authority to be more than negligible, or random, unnecessary or undesirable to the public interests of the resource area. Negligible means insignificant to the values or interests of the resource area"*

or take any other action relating thereto.

Explanation: The term "adverse impact" is commonly referenced in the regulatory language of the Massachusetts State Wetland Protection Act as a barometer of impact thresholds within wetlands jurisdiction. Adding this definition to Mashpee's Chapter 172 Bylaw will provide consistency of regulatory language and terminology.

Submitted by the Conservation Department

Article_____

To see if the Town will vote to amend Chapter 172-12 of the General Bylaws as follows:

Amend the language of 172-12(A) as follows:

Replace the phrase *"unacceptable, significant or cumulative effect"* with *"adverse impacts"* or take any other action relating thereto.

Explanation:

The term *"adverse impacts"* is used to describe a threshold of alteration within wetlands jurisdiction that is considered beyond negligible. It is referenced throughout the Massachusetts State Wetlands Protection Act. In order to establish consistency of proper terminology between the Chapter 172 Wetland Bylaw and the MA State Wetlands Protection Acts, this change of wording is necessary.

or take any other action relating thereto.

Submitted by the Conservation Department

Article [illegible]

To see if the Town will vote to amend Chapter 172-5 of the General Bylaws as follows:

Amend the language of subsection (A)(1) as follows:

Replace the phrase *"an Administrative Review Level 1"* with *"a permit"*

Preface the existing language of Subsection (A)(2) with the following:

"Any person filing a Notice of Intent application and/or a request for an Amended Order of Conditions with the Commission must, after being given written notice by the Commission of the time and date of the required hearing, notify all abutting property owners within 100 feet of the boundary of the property on which the work is proposed, according to the most recent records of the Assessors, including owners in another municipality"

or take any other action relating thereto.

<u>Explanation:</u> The Conservation Department no longer has an approval procedure called *"Administrative Review Level 1"*. Replacing this phrase with *"permit application"* accurately reflects the current procedures

The existing language in Subsection (A)(2) must include this prefacing language as it is required under the Massachusetts Wetlands Protection Act (310 CMR 10.05(4)) and thus must be reflected in the local bylaw

BYLAW REVIEW

Submitted by the Conservation Department

Article 42

To see if the Town will vote to amend Chapter 172-5 of the General Bylaws as follows:

Delete Section 172-5(B) and replace the language (B) as follows:

"Any applicant filing a Request for Determination of Applicability or Notice of Intent for activities on property other than their own must provide written authorization of the requested activity from the property owner at the time of filing. Notice and copy of the permit application must also be mailed certified to the owner"

or take any other action relating thereto.

Explanation: Sometimes, an applicant will request work to be done, either wholly or partially, on property not owned by the applicant *(for example, a hazardous tree is requested to be removed by an applicant and the tree lies on a neighboring property in close proximity to the applicant's home)* In these instances, the applicant is required to provide documentation of written permission from the property owner and have this documented permission accompany the permit application. The existing language requires notification to be provided to the property owner if the applicant is not the property owner; however, it is necessary to have this permission in writing before the permit application is placed on a meeting agenda, so the other property owner is aware of the request prior to a given meeting.

BYLAW REVIEW

Submitted by the Conservation Department

Article 45

To see if the Town will vote to amend Chapter 172-14 of the General Bylaws as follows:

Replace any reference to *"Office of Energy and Environmental Affairs"* and its acronym *"OEEA"* with *"Executive Office of Energy and Environmental Affairs"* and its acronym *"EOEEA"*

or take any other action relating thereto.

<u>Explanation:</u> The bylaw must accurately reflect any name/acronym changes in reference to other state agencies in the bylaw language. This is housekeeping amendment.

BYLAW REVIEW
Submitted by the Conservation Department

Article _____

To see if the Town will vote to amend Section 173-3 (Violations and Penalties) of the General Bylaws by deleting the phrase *"not to exceed three hundred dollars ($300) per incident"* and inserting *"as established by the Board of Selectmen"*

Or take any action related thereto

Explanation:

The current cap for non-criminal offenses under the bylaw is $300 per offense. In the event that this cap is increased in the future, the proposed replacement wording won't restrict the commission to a cap of $300

BYLAW REVIEW

Submitted by the Conservation Department

Article_

To see if the Town will vote to appropriate and transfer the sum of $40,000 from the Community Preservation 10% Open Space/Recreation Reserve in accordance with the provisions of M.G.L., Chapter 44B, §5, for the purpose of funding the Ockway Bay Boat Ramp Improvement Project II, including necessary costs and expenses related thereto, as recommended by the Community Preservation Committee, or take any other action relating thereto.

Submitted by the Community Preservation Committee

Explanation: In October 2017 CPA funding in the amount of $121,500 was approved to develop a site plan and to reconfigure the Ockway Bay parking lot. As a result of site reconstruction, the parking lot will now accommodate 19 vehicle/trailer spaces and 8 vehicle-only spaces. Additional CPA monies are required to complete the project which involves more extensive site work due to existing topography. The additional $40,000 required to complete this project would fund the top course of asphalt, shoulder work, landscape and an outdoor storage area for the Department of Natural Resources (included in original plan). The Ockway Bay Boat Ramp is one of the Town's three public launch facilities for boating access and it is used year round by recreational boaters and fishermen.

The vote of the Community Preservation Committee was unanimous 6-0 in support of this article.

Article_

To see if the Town will vote to appropriate and transfer the sum of $100,000 from the Community Preservation Fund 10% Affordable Housing Reserve, in accordance with the provisions of M.G.L. Chapter 44B, §5, for the purpose of appropriating funds for the acquisition of 12 Cypress Circle, property identified on Assessor's Map 21, Parcel 33 comprised of 1.2 acres, including any necessary costs and expenses related thereto, as recommended by the Community Preservation Committee; said funds shall be held and expended by the Affordable Housing Trust ("Trust") Board of Trustees for the purpose of funding Affordable Housing, including any necessary costs and expenses related thereto, provided, however, that said sum shall be used exclusively for community housing and shall remain subject to all the rules, regulations and limitations of M.G.L. Chapter 44B when expensed by the Trust, or take any action relating thereto.

Submitted by the Community Preservation Committee

Explanation: This article seeks to acquire vacant residential land identified as 12 Cypress Circle for affordable housing purposes in a well-established subdivision. The property is located at the end of two cul-de-sacs, Cypress Circle and Fox Hill Road. An opinion of value dated December 19, 2018 appraised the 1.2 acre site at $110,000. The 2019 Town of Mashpee assessment of this property is $102,900.

The Community Preservation Committee supports this project under the care and custody of Affordable Housing Trust for efficiency and effectiveness on decisions required regarding the development of affordable housing.

The vote of the Community Preservation Committee was unanimous 6-0 in support of this article.

CPC Articles – October 2019 Town Meeting Warrant

Article_

To see if the Town will vote to appropriate and transfer pursuant to the provisions of M.G.L. Chapter 44B, §6 to Reserve from the FY 2020 estimated Community Preservation revenues, the following amounts:

$154,794	10% for Open Space/Recreational Purposes
$154,794	10% for Historic Preservation Purposes
$154,794	10% for Affordable Housing Purposes
$1,043,551	to the FY 2020 Community Preservation Fund Budget for Appropriation Reserve as recommended by the Community Preservation Committee, or take any other acting relating thereto.

Submitted by the Community Preservation Committee

Explanation: This article is required annually to set aside the 10% Reserves of the estimated Community Preservation Funds for Open Space/Recreation Purposes, Historic Preservation Purposes and Affordable Housing Purposes and to fund the Budget for Appropriation Reserve.

The Community Preservation Committee voted to approve this article to set aside the 10% Reserves and Budget for Appropriation Reserve to be available for use in fiscal year 2020 as certified by the Finance Director and reflected in the FY 2020 CP-1.

The vote of the Community Preservation Committee was unanimous 6-0 in support of this article.

Article by Petition:

To see if the Town will vote to exclude current town employees from serving on Elected Town Boards.

Explanation: Town employees who hold elected positions on any Mashpee Town Board can be conflicted when making decisions regarding issues that are pertinent to their jobs or their co-workers. This article would exclude any person currently employed by the town of Mashpee from seeking election to any Mashpee Town Board.

We the undersigned support the article by petition to not allow current town employees to hold elected positions. We consider town employees to be conflicted when holding an elected seat on any town board.

Article _

To see if the Town will vote add the following sections to the Mashpee Zoning Bylaw:

§174-57 Temporary/Seasonal Signs

1.) In all districts, no temporary on-premises sign or other temporary on-premises advertising device shall be permitted except as follows:

a.) The design and location of all temporary/seasonal signs attached to or associated with a commercial property or use shall be subject to approval of the Building Commissioner following design guidelines approved by the Planning Board.

b.) Except as provided in §174-57.1, the Building Commissioner may approve temporary signs attached to or associated with a commercial property or use for no more than a four month period in any calendar year.

c.) Temporary signs associated with a non-commercial property, dwelling or use not exceeding 12 square feet may be placed in all districts.

d.) Signs related to a specific event on a specific date or dates shall be removed within 7 days after the event.

2.) Sandwich Board/A-Frame Signs shall be permitted only within the C-1 District and the Light Industrial Overlay District

a.) Only one sandwich board/A-frame sign shall be permitted per commercial storefront subject to approval of the Building Commissioner.

b.) Sandwich Board signs will only be displayed during the commercial storefront's displayed hours of operation and shall be brought inside when not open for business.

c.) Sandwich Board signs will not be permitted if they hinder adequate access to the pedestrian right of way or neighboring storefronts.

§174-57.1 Exceptions to the Above

a.) Upon the expiration of the initial four-month period for a temporary/seasonal sign for a commercial property or use, the Building Commissioner may permit a temporary sign for an additional four month period upon written application, if need is shown.

Temporary/Seasonal Sign Guidelines

TBD
